## EU Instant Payments Mandate: Banks Face Implementation Challenges

The EU Instant Payments Regulation, effective since April 2024, mandates that all banks in the Eurozone must offer instant credit transfers. The first deadline requires banks to enable receiving instant payments by January 2025, followed by sending capabilities by January 2027. This regulation aims to make instant payments universally accessible and affordable, with charges not exceeding those for standard credit transfers. Banks face significant challenges in upgrading legacy systems, ensuring 24/7 availability, and managing real-time fraud risks. For corporates, this means faster settlement, improved cash flow visibility, but also a need to adapt internal processes and treasury systems to leverage real-time capabilities effectively. The regulation also includes provisions for sanctions screening, requiring banks to verify payees against sanctions lists immediately.

- EU Instant Payments Regulation effective April 2024.
- Banks must offer instant payment \*receipt\* by January 2025.
- Banks must offer instant payment \*sending\* by January 2027.

### SO WHAT FOR RBI CASH MANAGEMENT

This regulation is critical for CMlplus, as it directly impacts payment processing in CEE countries within the Eurozone and potentially influences non-Euro CEE markets. RBI must ensure its network banks and the CMlplus platform are fully compliant, offering robust instant payment capabilities (both send and receive) to corporate clients, supporting multi-currency real-time transactions and providing tools for real-time liquidity management.

URGENT

Der Treasurer | 2026-06-01 | #02

## PSD3 Proposal Advances: Open Banking's Next Evolution

The proposed PSD3 and PSR package seeks to replace PSD2, addressing its shortcomings and adapting to new digital payment realities. Key objectives include strengthening fraud prevention measures, improving consumer rights, and fostering greater competition and innovation in the payment sector. For open banking, the new framework aims to refine data access rules, enhance API standards, and potentially introduce new services beyond current account information and payment initiation. Corporate treasurers should anticipate changes in how they interact with banks and third-party providers, with a focus on more secure and standardized API-based services. The regulation is expected to streamline cross-border payments and further integrate the European payment market, requiring banks like RBI to adapt their API strategies and compliance frameworks.

- PSD3 and PSR proposed to replace PSD2.
- Focus on enhanced fraud prevention and consumer protection.
- Aims to refine Open Banking data access and API standards.

### SO WHAT FOR RBI CASH MANAGEMENT

PSD3 and PSR are crucial for CMlplus's Open Banking strategy. RBI needs to monitor the legislative progress closely to ensure CMlplus APIs remain compliant and competitive. This includes adapting to new security requirements, potentially expanding API functionalities, and integrating new data access rules to offer advanced services like enhanced VoP and eBAM capabilities to corporate clients across CEE.

## AI-Powered Treasury Systems Boost Fraud Prevention, Efficiency

The latest generation of TMS integrates AI and machine learning algorithms to analyze payment patterns, detect anomalies, and flag suspicious transactions in real-time, drastically improving fraud prevention capabilities. Beyond security, these systems offer advanced forecasting models, automated reconciliation, and intelligent cash pooling, leading to greater operational efficiency and better liquidity management. The adoption of ISO 20022 messaging standards facilitates richer data exchange, which is crucial for AI-driven analytics. Corporates are seeking solutions that offer seamless integration with their ERP systems and banking platforms (via EBICS, H2H, APIs) to create a holistic view of their financial operations. The focus is on reducing manual intervention, minimizing human error, and providing actionable insights for treasury decision-making in a complex, multi-currency environment.

- AI/ML integration in TMS enhances real-time fraud detection.
- Advanced TMS features include automated reconciliation and cash pooling.
- ISO 20022 data enriches AI analytics for better insights.

### SO WHAT FOR RBI CASH MANAGEMENT

This trend directly impacts CMiplus's value proposition. RBI should focus on integrating advanced fraud prevention features into CMiplus, leveraging AI/ML for transaction monitoring. Enhancing connectivity options like EBICS v3 and H2H with richer ISO 20022 data, and offering robust API integrations with corporate TMS/ERP systems, will be crucial to meet client demands for efficiency and security in CEE.

## EU Instant Payments Regulation: Banks Race for Compliance Deadline

The EU Instant Payments Regulation, effective from early 2025 for receiving and early 2026 for sending, mandates that all Eurozone banks offer instant credit transfers at no additional cost compared to standard transfers. This requires significant infrastructure upgrades, including 24/7/365 processing capabilities and robust fraud prevention mechanisms. Banks are also grappling with the full migration to ISO 20022 for these transactions, ensuring seamless interoperability and richer data. The regulation is expected to boost liquidity management for corporates and foster innovation in payment services, but poses a substantial operational challenge for many financial institutions, particularly in CEE where adoption rates vary.

- Regulation mandates instant payments for Eurozone banks.
- No additional fees for instant transfers vs. standard.
- Deadline for sending instant payments: early 2026.

### SO WHAT FOR RBI CASH MANAGEMENT

CMiplus must ensure full compliance with the EU Instant Payments Regulation, supporting 24/7 instant payment processing for its CEE clients and adhering to ISO 20022 standards. This presents an opportunity to enhance real-time liquidity management and offer competitive payment services.

## Open Banking APIs Revolutionize Corporate eBAM and VoP Services

Open Banking APIs are moving beyond retail banking to offer significant benefits for corporate treasury functions. Specifically, they are facilitating real-time Electronic Bank Account Management (eBAM), allowing corporates to manage bank accounts, mandates, and signatories more efficiently across multiple banks and regions. Furthermore, these APIs are crucial for the widespread implementation of Verification of Payee (VoP) services, which help prevent payment fraud by confirming beneficiary details before transactions are initiated. The integration of these API-driven services into Treasury Management Systems (TMS) is becoming a key differentiator for banks, offering enhanced data visibility and control for corporate clients, especially those operating in diverse markets like CEE.

- Open Banking APIs enable real-time eBAM.
- VoP services enhanced by API connectivity.
- Fraud prevention is a key driver for adoption.

### SO WHAT FOR RBI CASH MANAGEMENT

CMlplus should leverage Open Banking APIs to offer advanced eBAM functionalities and integrate VoP services, enhancing security and efficiency for CEE corporate clients. This aligns with the platform's focus on digital transformation and fraud prevention.

## EBICS v3.0 Adoption Accelerates Across European Corporate Treasury

EBICS (Electronic Banking Internet Communication Standard) v3.0 is becoming the preferred channel for secure corporate-to-bank communication in many European countries, including those in the CEE region. This latest version offers significant improvements over previous iterations, including stronger encryption, better authentication mechanisms, and native support for the ISO 20022 XML standard. Its ability to handle multi-bank and multi-country payments efficiently makes it invaluable for international corporates seeking to centralize their treasury operations. The ongoing push for digital transformation and the need for robust, standardized communication channels are accelerating its adoption, allowing treasurers to automate processes and gain better visibility over their cash positions across various banking partners.

- EBICS v3.0 offers enhanced security and automation.
- Native support for ISO 20022 XML messages.
- Facilitates multi-bank and multi-country payments.

### SO WHAT FOR RBI CASH MANAGEMENT

CMlplus must ensure full support for EBICS v3.0, including its advanced security features and ISO 20022 capabilities, to meet the evolving needs of its CEE corporate clients. Promoting its benefits for secure, automated bank communication is key.

## CEE Instant Payments Surge: EU Mandate Drives Adoption

The recent EU Instant Payments Regulation, which came into full effect for receiving payments in early 2025 and for sending payments by early 2026, is now showing its full impact across the CEE region. Strategic Treasurer reports a notable surge in instant payment volumes, especially for corporate transactions, driven by the mandate for all EU/EEA banks to offer instant credit transfers. While some CEE countries were early adopters, the regulation is standardizing the landscape, pushing remaining banks to upgrade infrastructure. Corporates are increasingly leveraging instant payments for improved cash flow visibility, just-in-time inventory management, and faster supplier payments. Challenges remain in full interoperability and fraud prevention, but the overall trend points to a robust real-time payment ecosystem.

- EU Instant Payments Regulation fully effective for sending payments by early 2026.
- Significant increase in corporate instant payment volumes across CEE.
- Mandate requires all EU/EEA banks to offer instant credit transfers.

### SO WHAT FOR RBI CASH MANAGEMENT

This trend is critical for RBI CMiplus, reinforcing the need for robust instant payment capabilities across all CEE network banks. CMiplus must ensure seamless real-time processing, fraud detection, and reporting to meet corporate demands and regulatory compliance. It also presents opportunities for new real-time liquidity and cash management services.

## ISO 20022 Global Mandate Transforms Cross-Border Payments

The phased global migration to ISO 20022 for cross-border payments continues its momentum, with key deadlines met by major payment systems like SWIFT CBPR+ and various domestic high-value payment systems. Strategic Treasurer highlights that corporate treasuries are beginning to realize the benefits of the richer, structured data offered by the ISO 20022 standard, leading to enhanced straight-through processing (STP) and reduced manual intervention. While the transition still presents challenges, particularly around data mapping and system upgrades for some legacy platforms, the long-term vision of a more transparent and efficient global payment landscape is taking shape. Banks are investing heavily in their infrastructure to support the new standard, ensuring compliance and offering value-added services to their corporate clients.

- SWIFT CBPR+ and other major systems have met ISO 20022 migration deadlines.
- Richer, structured data improves STP and reconciliation for corporates.
- Challenges include data mapping and legacy system upgrades.

### SO WHAT FOR RBI CASH MANAGEMENT

For RBI CMiplus, full adherence to ISO 20022 is paramount for both SEPA and cross-border payments. CMiplus must ensure its H2H, SWIFT, and API channels fully support the standard's rich data, enabling advanced reconciliation and reporting for CEE corporates. This also impacts EBICS, requiring careful management of message formats.

## PSD3 Proposal: Open Banking's Next Evolution for Corporates

Strategic Treasurer reports on the ongoing discussions and potential finalization of the PSD3 and FIDA legislative package, which aims to replace PSD2 and introduce a broader framework for financial data sharing. Unlike PSD2's focus primarily on payment initiation and account information, PSD3/FIDA will extend data access to a wider range of financial products and services, including lending, investments, and insurance. For corporate treasury, this means a potential explosion of new Open Banking APIs offering consolidated financial views, enhanced liquidity forecasting, and automated treasury processes. While the regulatory details are still being ironed out, the direction is clear: more comprehensive data sharing, stronger consumer/corporate rights, and increased competition among financial service providers. Banks and fintechs are preparing for the next wave of innovation driven by these regulations.

- PSD3/FIDA aims to replace PSD2, expanding financial data sharing.
- Scope extends beyond payments to lending, investments, and insurance.
- New Open Banking APIs expected for consolidated financial views and forecasting.

### SO WHAT FOR RBI CASH MANAGEMENT

The evolution of Open Banking under PSD3/FIDA is a strategic imperative for CMIplus. RBI must proactively develop and enhance its Open API offerings to leverage broader data access, providing CEE corporates with advanced cash management, liquidity, and treasury services. Compliance with new data sharing and security requirements will be crucial.

## ECB Holds Latest Monetary Policy Press Conference

On June 11, 2026, the ECB's Governing Council convened for its regular monetary policy meeting, followed by a press conference. While specific outcomes are not detailed in the provided source, such conferences typically cover decisions on the main refinancing operations rate, the marginal lending facility rate, and the deposit facility rate. Discussions also encompass the economic outlook for the euro area, inflation projections, and the future stance of monetary policy. These decisions significantly impact liquidity and financing conditions for banks and corporates across the CEE region, influencing investment and borrowing costs.

- Date: 11 June 2026
- Focus: Interest rates, economic outlook, inflation projections
- Impact: Influences corporate financing and liquidity management

### SO WHAT FOR RBI CASH MANAGEMENT

Monetary policy decisions directly affect the cost of funding and returns on deposits for RBI's corporate clients. CMIplus users need to be aware of interest rate changes for cash pooling, liquidity management, and multi-currency payments, making this a critical input for treasury strategies.

## Digital Euro Project Advances with Pilot and Innovation Platform

The ECB is actively progressing with the digital euro initiative, outlining its purpose, functionality, and privacy safeguards. The project involves an innovation platform and a pilot phase to rigorously test its technical implementation and user experience. Key areas of focus include how it works, why it's needed, and its timeline for development. This initiative aims to complement cash, offering a secure, efficient, and widely accessible digital payment method for the euro area, with potential implications for cross-border payments, instant payments, and overall financial stability. The ongoing work includes defining the scheme rulebook and engaging stakeholders.

- Status: Ongoing pilot phase and innovation platform
- Purpose: Complement cash, secure digital payments
- Focus: Privacy, functionality, technical design, scheme rulebook

### SO WHAT FOR RBI CASH MANAGEMENT

The digital euro represents a significant future development for payments in the CEE region. CMIplus must monitor its progress closely, as it could introduce new payment rails, require API integrations, and impact corporate treasury strategies for multi-currency and instant payments, potentially influencing liquidity and virtual account structures.

## ECB Explores Tokenisation and DLT for Future Payments

Under its 'Payments & financial stability' mandate, the ECB is conducting significant exploratory work into tokenisation and DLT. This includes the Appia project, which is likely a collaborative effort to investigate the practical applications and implications of these technologies for wholesale payments and securities settlement. The focus is on understanding the benefits, risks, and operational challenges of integrating DLT into existing or new financial market infrastructures. This work is crucial for shaping the future of European payments, potentially leading to more efficient, secure, and resilient systems that could impact real-time processing, cross-border transactions, and the role of central banks in a tokenized economy.

- Project: Appia (exploratory work)
- Technology: Tokenisation and Distributed Ledger Technology (DLT)
- Objective: Enhance financial market infrastructures

### SO WHAT FOR RBI CASH MANAGEMENT

DLT and tokenisation could fundamentally change how corporate payments and liquidity are managed, especially for cross-border transactions. CMIplus needs to track these developments to anticipate future standards, potential new payment channels, and opportunities for real-time treasury operations, virtual accounts, and payment factory models.

## UK APP Fraud Surges, £1.3 Billion Stolen in 2025

UK Finance reported a significant increase in fraud, totaling £1.28 billion stolen in 2025, marking a four percent rise compared to the previous year. A key driver of this surge was Authorised Push Payment (APP) fraud, which saw a sharp increase after a period of decline. APP fraud involves victims being tricked into sending money directly to fraudsters. The figures underscore the ongoing sophistication of criminal tactics and the critical need for enhanced security measures and public awareness campaigns across the financial sector. This trend puts pressure on banks and payment providers to strengthen their fraud detection and prevention capabilities.

- Criminals stole £1.28 billion through fraud in the UK last year.
- Fraud was up four per cent on 2024.
- Authorised Push Payment (APP) fraud is rising sharply.

### SO WHAT FOR RBI CASH MANAGEMENT

This news is highly relevant for RBI Cash Management and CMiplus as fraud prevention is paramount for corporate clients. The rise in APP fraud necessitates continuous review and enhancement of CMiplus's security features, transaction monitoring, and client education to protect against social engineering and payment redirection scams. It also highlights the need for robust internal controls and potentially real-time fraud detection capabilities.

## ACI Worldwide Partners EPI for Wero Instant Payments in Europe

ACI Worldwide, a leading global provider of real-time payment solutions, has announced its collaboration with the European Payments Initiative (EPI). The core of this partnership involves integrating the EPI's Wero digital wallet into ACI's extensive payments platform. This strategic move seeks to bolster the rollout and acceptance of instant payments throughout the European continent. Wero, designed to be a pan-European payment solution, aims to offer a unified and seamless experience for consumers and merchants, reducing reliance on non-European payment schemes. For ACI, this integration means its clients, including banks and financial institutions, will be better equipped to support the evolving European payment ecosystem, particularly in the context of SEPA Instant Credit Transfer (SCT Inst) and future regulatory mandates. The initiative is crucial for fostering competition and innovation in the European payments market.

- ACI Worldwide joins the European Payments Initiative (EPI).
- Integration of EPI's Wero digital wallet into ACI's payments platform.
- Goal: Accelerate instant payment adoption across Europe.

### SO WHAT FOR RBI CASH MANAGEMENT

This is highly relevant for RBI Cash Management and the CMiplus platform. As a key player in CEE, RBI must ensure its platform supports evolving European payment standards like EPI and Wero for instant payments and SEPA. This partnership indicates significant progress in the European payment infrastructure, which CMiplus needs to monitor for future integration and compliance to offer seamless services to its corporate clients.

## EU Legislation to Unlock SEPA Instant for Corporates

The upcoming EU legislation is expected to mandate broader access and usage of SEPA Instant Payments, particularly for corporate clients. This move is designed to overcome current adoption hurdles, such as varying bank readiness and corporate integration challenges, by standardizing requirements and promoting interoperability. For corporate treasurers, this means enhanced liquidity management, faster reconciliation, and improved working capital efficiency through immediate payment processing. The legislation will likely set clear timelines and technical specifications, compelling banks and payment service providers to fully support and offer SEPA Instant Payment services, thereby fostering a true real-time treasury environment across the European Economic Area.

- EU legislation targets increased SEPA Instant adoption.
- Focus on unlocking real-time treasury for corporates.
- Aims to standardize requirements and interoperability.

### SO WHAT FOR RBI CASH MANAGEMENT

This legislation is critical for RBI Cash Management and CMlplus. It necessitates proactive development and enhancement of CMlplus to fully support mandated SEPA Instant Payment capabilities for CEE corporate clients, ensuring compliance and competitive advantage. RBI must prepare for increased client demand for real-time payment processing and liquidity management tools.

## ISO 20022: November 2026 Update Demands Data-Centric Approach

Following Swift's migration deadline and the launch of US Fedwire Funds Service, ISO 20022 adoption is widespread. However, the upcoming November 2026 standards update poses a new challenge by eliminating unstructured postal addresses from payment messages. This critical change will force banks and corporate treasurers to adopt a more structured, data-centric methodology for payment information. It requires a thorough review of existing payment processes, data capture, and system integrations to ensure compliance and avoid payment processing disruptions. The update emphasizes the need for high-quality, standardized data, which will ultimately enhance straight-through processing and reduce errors in global payments.

- Global ISO 20022 adoption aided by Swift and Fedwire.
- November 2026 update removes unstructured postal addresses.
- Requires banks and corporates to adopt data-centric approach.

### SO WHAT FOR RBI CASH MANAGEMENT

This update is crucial for CMlplus. RBI Cash Management must ensure CMlplus and its integrated systems are ready to handle the structured data requirements by November 2026, especially for cross-border and SEPA payments. This involves updating APIs, H2H, and Web channels to support the new data format and educating clients on the necessary changes to their payment initiation processes.

## Adyen Acquires Orb for \$335 Million, Boosting Enterprise Billing

Adyen, a prominent global payments processor, has announced the acquisition of Orb, an enterprise billing platform, for \$335 million. This acquisition is Adyen's second significant deal within a short period, signaling a clear strategy to expand its services beyond core payment processing. By integrating Orb's billing capabilities, Adyen can offer more comprehensive financial solutions to its enterprise clients, streamlining their revenue operations from payment acceptance to complex billing cycles. This move reflects a broader industry trend towards consolidated financial technology platforms that provide end-to-end solutions for large businesses, impacting how corporate treasuries manage their incoming payments and reconciliation.

→ Adyen, a Dutch payments processor, made its second major acquisition in months.

→ The deal is for \$335 million.

→ Adyen acquired enterprise billing platform Orb.

### SO WHAT FOR RBI CASH MANAGEMENT

This acquisition is significant for RBI Cash Management as it indicates a trend towards integrated payment and billing solutions for large corporates, CMIplus's target market. CMIplus should monitor how such integrated offerings evolve, as corporate clients may increasingly seek platforms that combine payment processing with advanced billing and reconciliation features. This could influence CMIplus's future API strategy, partnerships, or product development to meet evolving corporate treasury needs, especially concerning virtual accounts and payment factories.

## Fraudio Secures Funding for AI-Driven Fraud Detection Expansion

Fraudio has announced a successful funding round aimed at bolstering its AI-driven fraud detection technology. The company's focus is on leveraging artificial intelligence and machine learning to identify and prevent sophisticated financial crimes in real-time. This expansion is critical as payment fraud continues to evolve in complexity and scale, impacting businesses and financial institutions globally. The new capital will be used to enhance Fraudio's platform, improve its predictive analytics, and potentially expand its market reach. For the payments industry, this signifies a growing trend towards more intelligent and proactive fraud prevention mechanisms, moving beyond traditional rule-based systems to dynamic, adaptive AI models that can detect emerging fraud patterns. This development is crucial for maintaining trust and security in digital transactions.

→ Fraudio raises funding for expansion.

→ Focus on AI-driven fraud detection technology.

→ Aims to combat evolving and sophisticated financial crimes.

### SO WHAT FOR RBI CASH MANAGEMENT

Fraud prevention is a critical component of RBI Cash Management's offering and the CMIplus platform. The expansion of AI-driven fraud detection solutions by companies like Fraudio highlights the need for CMIplus to continuously evaluate and integrate advanced technologies to protect corporate clients from financial crime. This development reinforces the importance of robust, intelligent fraud prevention strategies for maintaining trust and security in corporate cash management.

## OTP Bank Embraces AI and Data Literacy in CEE

OTP Bank's commitment to becoming AI and data literate signifies a significant strategic shift towards leveraging advanced technology in the competitive CEE banking market. This involves not only implementing AI tools but also fostering a data-driven culture and upskilling its workforce. The move is expected to impact various areas, including operational efficiency, risk management, personalized customer experiences, and potentially the development of new cash management and treasury solutions. By integrating AI into its core functions, OTP Bank aims to gain a competitive edge and meet the evolving demands of corporate clients in the region, setting a benchmark for digital innovation. This strategic direction positions OTP Bank as a leader in adopting cutting-edge technology within Central and Eastern Europe.

- OTP Bank is a prominent CEE financial institution.
- Strategic focus on AI and data literacy for digital transformation.
- Aims to enhance operational efficiency and customer experience.

### SO WHAT FOR RBI CASH MANAGEMENT

This development highlights the increasing importance of AI and data analytics in CEE banking, directly impacting RBI's CMIplus platform. CMIplus must continue to integrate AI-driven features for fraud detection, liquidity forecasting, and personalized client insights to remain competitive against digitally advanced peers like OTP Bank. It also underscores the need for RBI to ensure its own workforce is data-literate to effectively leverage these technologies.

URGENT

Oliver Wyman Corporate Banking | 2024-03-15 | #01

## European Wholesale Banks: Seizing the Moment for Future Performance

This insight likely highlights that European wholesale banking, despite past challenges, is entering a phase ripe for strategic transformation and improved performance. The context would involve a detailed analysis of market dynamics, regulatory shifts, and technological advancements (like Open Banking, real-time payments, and AI) that are creating new avenues for growth. The methodology would typically involve market research, financial analysis of banking performance, and expert interviews. Key implications for banks would be the urgent need to invest in digital capabilities, optimize operational efficiency, and re-evaluate their value proposition to corporate clients, moving beyond traditional lending to integrated ecosystem solutions.

- Strategic imperative for European wholesale banks to overcome historical underperformance.
- Focus on digital transformation and innovation as key drivers for future growth.
- Emphasis on optimizing operational efficiency and cost structures.

### SO WHAT FOR RBI CASH MANAGEMENT

CMlplus must align with this strategic imperative by accelerating its digital roadmap, particularly in CEE. This means enhancing API capabilities for Open Banking, expanding real-time payment offerings, and exploring AI-driven cash flow forecasting to provide superior value to corporate treasuries.

URGENT

Oliver Wyman Corporate Banking | 2023-11-15 | #02

## Wholesale Banking Outlook 2024: Strategic Credit Extension

This outlook for 2024 would analyze the economic environment, interest rate trends, and regulatory landscape impacting wholesale banking. While 'Extending Credit' is highlighted, the broader outlook would cover all aspects, including transaction banking, cash management, and capital markets. It would likely suggest that banks need to move beyond traditional credit provision to more sophisticated, data-driven lending solutions, potentially leveraging digital platforms and embedded finance. The report would likely identify opportunities in specific sectors or geographies, and the need for banks to enhance their risk management capabilities while pursuing growth.

- Credit extension remains a core, evolving component of wholesale banking strategy.
- Integration of credit with digital platforms and broader financial services is crucial.
- Anticipated shifts in client demand and regulatory expectations for 2024.

### SO WHAT FOR RBI CASH MANAGEMENT

While CMlplus is cash management, understanding the broader wholesale banking outlook, especially regarding credit, is vital for integrated client solutions. CMlplus should explore how its data and payment flows can inform credit decisions or facilitate asset-based lending, enhancing the overall RBI corporate offering and client stickiness.

## Treasury Transformation: Banks Must Embrace Digital to Capture Future Value

The EY report highlights a significant gap between what corporate treasurers expect and what banks currently offer, particularly in digital integration and advisory services. Treasurers are increasingly demanding seamless digital experiences, real-time data access, and proactive insights to manage liquidity, risk, and working capital more effectively. Banks that fail to invest in advanced digital platforms, AI-driven analytics, and API connectivity risk losing market share to fintechs and more agile competitors. The transformation requires a strategic focus on customer-centricity, leveraging technology to provide value-added services beyond traditional transaction processing.

- Corporate treasurers prioritize digital integration and real-time data access.
- Banks must move beyond transactional services to offer advisory and strategic insights.
- AI and advanced analytics are key differentiators for future treasury services.

### SO WHAT FOR RBI CASH MANAGEMENT

This insight directly impacts CMIplus by underscoring the need for enhanced digital capabilities and API integration. Focusing on real-time data, advanced analytics, and seamless ERP/TMS connectivity will be critical for CMIplus to meet evolving corporate treasurer demands in the CEE region.

## AI and Data Analytics are Pivotal for Proactive Treasury Management

The report emphasizes that AI and machine learning are no longer futuristic concepts but essential components of modern treasury operations. Treasurers are looking for banks to provide AI-powered forecasting for liquidity, fraud detection, and risk management. The ability to analyze vast amounts of data to identify patterns, predict trends, and offer actionable recommendations is highly valued. Banks that can leverage AI to offer personalized insights and automated solutions will be better positioned to support their corporate clients in navigating complex financial landscapes.

- AI enables predictive liquidity forecasting and enhanced risk management.
- Data analytics provide actionable insights for working capital optimization.
- Personalized, AI-driven recommendations are a key expectation from treasurers.

### SO WHAT FOR RBI CASH MANAGEMENT

For CMIplus, this means prioritizing the integration of AI and advanced analytics into the platform. Developing capabilities for predictive cash flow forecasting, intelligent fraud detection, and personalized treasury advice will be crucial for maintaining relevance and providing superior value to CEE corporates.

## AI and Automation Revolutionize Treasury Operations: Efficiency and Insights Ascend

The PwC Global Treasury Survey highlights a growing adoption of AI and automation technologies within treasury departments. These technologies are instrumental in streamlining repetitive tasks, such as reconciliation and data entry, thereby freeing up valuable human resources. Furthermore, AI-powered analytics are enhancing cash visibility and forecasting accuracy, allowing for more proactive risk management and optimized liquidity deployment. The survey indicates that organizations leveraging these advanced tools are better positioned to navigate complex financial landscapes and achieve greater operational agility.

- Increased adoption of AI and automation in treasury operations.
- Significant improvements in operational efficiency and task automation.
- Enhanced cash visibility and forecasting accuracy through AI analytics.

### SO WHAT FOR RBI CASH MANAGEMENT

For RBI Cash Management and CMlplus, this signifies a crucial opportunity to integrate AI-driven insights and automation into our platform. Enhancing eBAM capabilities with AI for predictive liquidity management and automating reconciliation processes via API integrations will be key differentiators.

## API Banking and Open Banking Drive Seamless Integration and Enhanced Treasury Control

The survey underscores the transformative impact of API banking on treasury management. By leveraging APIs, corporates can achieve real-time connectivity with their banks, enabling instant access to account information, payment initiation, and reconciliation data. This move away from traditional batch processing to real-time data flows is critical for modern treasury functions. Open Banking initiatives further amplify these benefits by fostering an ecosystem of innovation, allowing for the development of integrated solutions that enhance cash visibility, liquidity management, and payment processing efficiency.

- API banking is enabling real-time data exchange between corporates and banks.
- Open Banking principles are fostering an integrated financial ecosystem.
- Treasurers are gaining enhanced control and visibility over financial operations.

### SO WHAT FOR RBI CASH MANAGEMENT

CMlplus must prioritize robust API capabilities to support Open Banking initiatives, enabling seamless integration with corporate ERP/TMS systems. This will allow for real-time cash visibility, efficient payment initiation, and advanced eBAM functionalities for our CEE clients.

## PSD3 and Open Banking Drive Payments Transformation by 2026

By 2026, the implementation of PSD3 is expected to significantly reshape the European payments landscape, building on PSD2's foundations. This new directive will likely mandate stronger customer authentication, introduce more granular data sharing requirements, and push for greater interoperability through standardized APIs. Firms will need to invest in robust fraud detection mechanisms and ensure seamless integration with third-party providers (TPPs) to remain competitive. The focus will shift towards enabling more sophisticated payment initiation services and account information services, fostering a truly integrated digital payment ecosystem across the EU and CEE.

- Mandatory API standardization for TPP access.
- Enhanced fraud prevention measures, including transaction monitoring.
- Increased scope for Open Banking beyond basic AIS/PIS.

### SO WHAT FOR RBI CASH MANAGEMENT

CMlplus must prioritize API development for PSD3 compliance and expanded Open Banking services, including VoP. Integrating advanced fraud detection and real-time payment capabilities will be crucial to maintain a competitive edge for corporate clients in CEE.

## EACT Treasury Survey 2026 Reveals Top Corporate Treasurer Priorities

The EACT Annual Treasury Survey 2026 represents the most authoritative assessment of the European corporate treasury profession. Gathering insights on priorities, concerns, and ambitions, the survey provides a crucial snapshot of the current landscape. The results are instrumental in shaping the upcoming Journeys to Treasury report, offering deep dives into key industry trends. For banks like RBI, understanding these priorities is vital for aligning product development, particularly for platforms like CMlplus, to meet evolving corporate needs in areas such as digitalization, liquidity management, and compliance. The survey's broad reach across European treasurers ensures its findings are highly representative and impactful for strategic planning.

- Most authoritative barometer for European corporate treasurers.
- Defines key industry trends for the year ahead.
- Shapes the content of the next Journeys to Treasury report.

### SO WHAT FOR RBI CASH MANAGEMENT

The survey results are critical for CMlplus, informing the roadmap by highlighting current corporate treasury priorities. This includes potential focus areas like advanced liquidity management, enhanced digital payment solutions (e.g., instant payments, VoP), and robust compliance features, ensuring CMlplus remains competitive and relevant for CEE corporates.

## GACT Publishes 4th Edition of Corporate Treasury Guiding Principles

The 4th Edition of The Guiding Principles of Corporate Treasury, published by GACT, provides a comprehensive framework for establishing and evolving a robust corporate treasury function. This publication details key requirements and recommendations, offering invaluable insights into best practices for treasury operations, risk management, and strategic financial planning. It serves as a benchmark for corporates aiming to optimize their treasury structures and processes, ensuring efficiency and resilience. For financial institutions, understanding these principles helps in developing services and platforms that support treasurers in adhering to these established guidelines, fostering compliance and operational excellence across the European treasury landscape.

- Outlines key requirements for treasury function development.
- Provides recommendations for evolving corporate treasury.
- Serves as a foundational guide for best practices.

### SO WHAT FOR RBI CASH MANAGEMENT

These guiding principles offer strategic insights for CMlplus, enabling RBI to align its platform and services with established best practices in corporate treasury. This ensures CMlplus supports clients in building resilient and efficient treasury functions, particularly in areas like cash management, payment processing, and regulatory compliance across CEE, enhancing its value proposition.

## Banks Balance AI Ambition with Macro Headwinds

The 2026 banking outlook underscores the imperative for financial institutions to accelerate their AI adoption. This isn't merely about incremental improvements but about making "bold choices" to embed AI deeply across operations, from automating back-office processes to personalizing customer interactions and improving risk analytics. The challenge lies in balancing these ambitious AI initiatives against a backdrop of persistent macro headwinds, which demand careful resource allocation and a clear return on investment strategy. Banks that successfully navigate this will gain a significant competitive edge, transforming their service delivery and operational models.

- AI integration is a strategic imperative for competitive banking.
- Macroeconomic pressures necessitate careful AI investment decisions.
- AI aims to transform operations, risk, and client engagement.

### SO WHAT FOR RBI CASH MANAGEMENT

CMlplus should prioritize exploring AI-driven enhancements for corporate cash management, such as intelligent forecasting for liquidity, automated reconciliation, or AI-powered fraud detection. This strategic focus can differentiate CMlplus by offering advanced, efficient solutions to CEE corporates.

## 2023 Industry Outlook: Navigating Uncertainty in Corporate Banking

This outlook, though from 2023, provides foundational insights into the strategic challenges and opportunities that continue to shape the corporate banking landscape. It would have covered macroeconomic trends, geopolitical risks, and the accelerating pace of digital transformation. The 'Great Unknown' likely refers to the post-pandemic economic environment, inflation, supply chain disruptions, and evolving client expectations. The report would have emphasized the importance of robust risk management, strategic technology investments (e.g., AI, cloud), and adapting business models to remain competitive. It would have set the stage for the trends seen in 2024 and beyond.

- Economic uncertainty and volatility as a persistent challenge for corporate banking.
- Accelerated digital transformation and technology adoption as a strategic imperative.
- Emphasis on risk management and resilience in an unpredictable environment.

### SO WHAT FOR RBI CASH MANAGEMENT

While a 2023 outlook, its themes of uncertainty and digital transformation remain highly relevant. CMIplus should review its strategic resilience, ensuring its platform can adapt to market shifts and leverage emerging technologies like AI to provide stable, innovative solutions for corporate treasuries in CEE.

## Digital Assets and Open Banking Reshape Corporate Treasury Landscape

The EY report touches upon the growing influence of digital assets, including stablecoins, and the broader implications of Open Banking and PSD3. Corporate treasurers are exploring how these innovations can streamline payments, improve cross-border transactions, and enhance liquidity management. Banks that can offer integrated solutions for digital asset management, leverage Open Banking APIs for real-time data exchange, and support new payment rails will be at the forefront of treasury innovation. This requires a forward-thinking approach to technology adoption and regulatory compliance.

- Digital assets (e.g., stablecoins) offer potential for faster, cheaper payments.
- Open Banking APIs are crucial for real-time data aggregation and control.
- Treasurers are seeking integrated solutions for traditional and digital finance.

### SO WHAT FOR RBI CASH MANAGEMENT

CMIplus should actively monitor and integrate capabilities related to digital assets and leverage Open Banking APIs more extensively. Supporting new payment methods and providing seamless data flows through APIs will be vital for CMIplus to remain competitive and cater to the evolving needs of CEE corporates in a rapidly digitizing financial world.

## Enhanced Cash Visibility is Paramount for Strategic Treasury Decision-Making

The survey results consistently point to the critical importance of enhanced cash visibility. Treasurers are actively seeking solutions that provide a consolidated view of their cash positions across all accounts and geographies. This holistic perspective is essential for optimizing working capital, managing foreign exchange exposure, and ensuring sufficient liquidity for operational needs. The increasing complexity of global operations and the demand for real-time financial data underscore the ongoing need for advanced treasury management systems and bank connectivity solutions that deliver on this promise.

- Comprehensive cash visibility is a top strategic priority for treasurers.
- Real-time data is crucial for effective liquidity management.
- Optimizing working capital and managing FX exposure depend on visibility.

### SO WHAT FOR RBI CASH MANAGEMENT

For RBI Cash Management, enhancing our platform's ability to provide granular, real-time cash visibility across diverse CEE markets is paramount. This includes robust support for various payment channels and advanced reporting to empower our clients' strategic treasury decisions.

## DORA Mandates Robust Digital Operational Resilience for Financial Firms

The Digital Operational Resilience Act (DORA) will be fully applicable by 2025, making 2026 a critical year for compliance and operational maturity. DORA aims to harmonize and strengthen the ICT risk management framework across the EU financial sector. Firms must implement comprehensive strategies for ICT risk management, incident reporting, digital operational resilience testing, and managing third-party ICT risk, particularly with cloud service providers. This regulation emphasizes the need for robust business continuity plans and the ability to recover from severe operational disruptions, ensuring the stability and integrity of financial services.

- Mandatory comprehensive ICT risk management frameworks.
- Strict requirements for incident reporting and classification.
- Regular digital operational resilience testing (e.g., threat-led penetration testing).

### SO WHAT FOR RBI CASH MANAGEMENT

CMiplus must ensure full DORA compliance across its platform and underlying infrastructure, including third-party integrations. This requires robust cybersecurity measures, clear incident response protocols, and regular resilience testing to assure corporate clients of uninterrupted and secure cash management services.

## Stablecoins Poised for Disruptive Entrance in Banking

Deloitte's outlook highlights the "potential disruptive entrance of stablecoins" as a key challenge for banks in 2026. This implies that stablecoins could fundamentally alter the landscape of payments, cross-border transactions, and even corporate treasury functions by offering faster, cheaper, and more transparent alternatives. Banks must proactively assess the regulatory frameworks, technological infrastructure, and competitive threats posed by stablecoins. Strategic responses could range from developing proprietary stablecoin solutions to integrating existing ones or focusing on areas where traditional banking still holds an advantage, ensuring readiness for this evolving digital asset class.

- Stablecoins represent a significant disruptive force in banking.
- They challenge traditional payment systems and cross-border transactions.
- Banks must proactively assess regulatory and technological implications.

### SO WHAT FOR RBI CASH MANAGEMENT

CMIplus should actively monitor stablecoin developments and regulatory shifts in the CEE region, evaluating how they could be integrated into multi-currency payment offerings or used to enhance real-time cross-border liquidity for corporate clients. This proactive stance can position CMIplus at the forefront of payment innovation.

Euro Banking Association | 2025-11-20 | #01

## EBA Report: EU Regulatory Impact on Liquidity Management (IPR, PSR, PSD3)

INSTANT PAYMENTS, PSD3, LIQUIDITY MANAGEMENT, OPEN BANKING

The Euro Banking Association's Liquidity Management Working Group (LMWG) has published a report analyzing the profound effects of three critical EU regulatory initiatives: the Instant Payments Regulation (IPR), the proposed Payment Services Regulation (PSR), and the proposed Payment Services Directive 3 (PSD3). The report highlights how these measures are expected to drive the uptake of instant payments, foster a more level playing field among market participants, and fundamentally transform liquidity management practices across the financial sector. Banks need to understand these interconnected regulatory changes to adapt their strategies and operational frameworks for managing liquidity in a real-time payment environment, ensuring both compliance and competitive service offerings.

- Instant Payments Regulation (IPR) mandates instant payments availability and processing.
- Proposed Payment Services Regulation (PSR) will consolidate and update payment rules.
- Proposed Payment Services Directive 3 (PSD3) will evolve PSD2, impacting open banking.

### SO WHAT FOR RBI CASH MANAGEMENT

RBI/CMiplus must assess the report's findings to understand the combined impact of IPR, PSR, and PSD3 on corporate liquidity management services and real-time payment processing. This includes evaluating potential adjustments to cash pooling, multi-currency payment flows, and intraday liquidity reporting capabilities to ensure compliance and competitive service offerings.

## EBA Fraud Taxonomy v7.0 Released, Effective January 2027

PAYMENTS REGULATION, FRAUD, PSD3

**Deadline: 2027-01-01**

The Euro Banking Association (EBA) has published version 7.0 of its Fraud Taxonomy, which will become effective on 1 January 2027. This updated taxonomy is a crucial tool for financial institutions across Europe, offering a standardised framework to classify and describe various payment fraud scenarios, including card transactions. Key updates in version 7.0 include replacing 'emotional manipulation' with more specific modi like 'support a friend or family member fraud', 'romance fraud', and 'charity / donation fraud', and adding new labels for suspected money mule activity and 'card chip relay' fraud. The taxonomy aims to improve fraud monitoring, reporting, and information sharing, aligning with the overall shift towards coordinated pan-European fraud-fighting efforts, particularly in anticipation of data sharing requirements under the forthcoming Payment Services Regulation (PSR).

- EBA Fraud Taxonomy version 7.0 takes effect on 1 January 2027.
- Updates include more specific fraud modi and new labels for emerging trends.
- Provides a harmonised pan-European vocabulary for classifying payment fraud.

### SO WHAT FOR RBI CASH MANAGEMENT

RBI/CMiplus must integrate the EBA Fraud Taxonomy version 7.0 into its fraud monitoring and reporting systems by January 2027. This requires reviewing and updating internal fraud classification logic, data capture mechanisms, and reporting formats to align with the new taxonomy, ensuring compliance with future PSR requirements for fraud data sharing.

Deutsche Bank | 2026-06-15 | #01

## DB Accelerates API-Led Digital Transformation for Corporates

Deutsche Bank is strategically investing in its API platform, CB Connect, to deepen integration with corporate ERP and TMS systems. This initiative focuses on providing clients with real-time access to account information, payment initiation, and status updates, fostering greater automation and control over their financial operations. The bank's commitment to Open Banking principles allows multinational corporations, including those operating in CEE, to streamline their cash management processes and achieve better liquidity oversight. This digital transformation is key to meeting evolving client demands for speed and efficiency and is a core pillar of their corporate banking strategy.

→ Enhanced CB Connect API capabilities

→ Real-time data and payment initiation

→ Deeper ERP/TMS integration

### SO WHAT FOR RBI CASH MANAGEMENT

CMlplus must continue to innovate its Open API offerings to match or exceed DB's capabilities, particularly for multinational clients seeking advanced integration. Highlighting unique CEE-specific API services could be a differentiator.

URGENT

Deutsche Bank | 2026-06-15 | #02

## DB Boosts Real-Time Payments and Liquidity Solutions

Deutsche Bank is actively expanding its support for instant payment schemes across Europe, including SEPA Instant Credit Transfer, to provide corporates with faster and more efficient payment processing. Complementing this, the bank is developing advanced liquidity management tools, such as real-time cash pooling and virtual accounts, to give treasurers immediate insights and control over their global cash positions. For multinational corporations operating in CEE, these enhancements mean improved working capital management and reduced payment execution times, crucial for dynamic market environments. The bank's strategy is to deliver comprehensive, real-time financial infrastructure to its corporate clients.

→ Expanded Instant Payment support

→ Real-time cash pooling solutions

→ Enhanced liquidity visibility

### SO WHAT FOR RBI CASH MANAGEMENT

CMlplus's focus on Instant Payments and multi-currency capabilities is directly challenged. RBI should emphasize its strong local CEE network for real-time payments and localized liquidity solutions to maintain a competitive edge.

## UniCredit Accelerates Digital Transformation with Enhanced API Banking for Corporates

UniCredit is strategically investing in its digital infrastructure to offer advanced API banking capabilities, enabling corporate clients to integrate banking services directly into their ERP and TMS systems. This move is crucial for providing real-time account information, payment initiation, and liquidity management functionalities. The focus extends to CEE, where demand for sophisticated digital solutions is growing, allowing multinational corporations to centralize their treasury functions and optimize cash flows across the region. This digital push is a core component of their 'UniCredit Unlimited' strategy, emphasizing innovation and client-centric solutions.

- Focus on Open Banking APIs for corporate treasury integration.
- Real-time data exchange and payment initiation capabilities.
- Strategic relevance for multinational corporates operating in CEE.

### SO WHAT FOR RBI CASH MANAGEMENT

CMlplus faces increased competition from UniCredit's enhanced API offerings, particularly for clients seeking deep integration with their ERP/TMS. RBI should highlight its own robust API suite and strong CEE network capabilities.

## UniCredit Bolsters CEE Cash Management and Liquidity Solutions for Corporates

Recognizing the strategic importance of CEE, UniCredit is reinforcing its suite of cash management products tailored for multinational and large local corporates in the region. This involves expanding capabilities for cross-border cash pooling, both notional and physical, to improve liquidity utilization and reduce borrowing costs. The bank is also likely to be promoting virtual accounts to simplify reconciliation and improve payment processing efficiency across its CEE network. These enhancements aim to provide a more integrated and efficient treasury experience for clients managing complex cash flows across multiple CEE countries, aligning with their pan-European commercial bank strategy.

- Enhanced cross-border cash pooling services in CEE.
- Promotion of virtual accounts for improved reconciliation.
- Focus on optimizing liquidity for multinational corporations in the region.

### SO WHAT FOR RBI CASH MANAGEMENT

UniCredit's focus on CEE cash management directly challenges CMlplus's core offering. RBI must emphasize its deep local expertise, extensive CEE network, and tailored solutions for regional specificities to maintain its competitive edge.

## UniCredit Drives Instant Payments and ISO 20022 Adoption Across Europe

In line with evolving European payment regulations and market demands, UniCredit is prioritizing the rollout and enhancement of instant payment services for its corporate clients. This includes enabling real-time payment initiation and receipt, which is critical for optimizing working capital and improving supply chain efficiency. Concurrently, the bank is driving its full transition to the ISO 20022 messaging standard, offering richer data capabilities for payments and reporting. This ensures compliance with upcoming mandates and provides corporates with more granular information for reconciliation and treasury management, particularly beneficial for cross-border transactions within CEE.

- Full support and promotion of instant payment schemes.
- Accelerated migration to ISO 20022 for all payment messages.
- Enhanced data capabilities for corporate reconciliation and reporting.

### SO WHAT FOR RBI CASH MANAGEMENT

CMIplus must ensure its instant payment offerings and ISO 20022 capabilities remain best-in-class, emphasizing its readiness and seamless integration for CEE clients. Highlighting value-added services built on these standards is key to differentiating from competitors.

## HSBC Orion Powers UK Treasury's Digital Gilt Pilot

The UK Treasury's decision to mandate HSBC Orion for its Digital Gilt Instrument pilot issuance highlights HSBC's advanced capabilities in digital assets and blockchain technology. This platform will facilitate the issuance of tokenized government bonds, demonstrating a significant step towards the digitalization of capital markets. For corporate treasuries, this signals a future where traditional securities and potentially other financial instruments could be managed and transacted on similar digital platforms, offering new avenues for liquidity management and investment. It also underscores HSBC's commitment to leveraging innovative technology to transform financial services.

- HSBC Orion platform selected for UK Treasury's Digital Gilt pilot.
- Focus on digital asset issuance, specifically tokenized government bonds.
- Positions HSBC as a leader in digital capital markets infrastructure.

### SO WHAT FOR RBI CASH MANAGEMENT

This move by HSBC indicates a strategic push into digital assets and tokenized securities, potentially impacting future corporate treasury services. CMIplus should monitor how such platforms could evolve to handle corporate debt, supply chain finance, or even advanced cash pooling mechanisms, requiring future integration capabilities.

## Citi Bolsters CEE API Cash Management for Real-time Treasury

Citi is inferred to be intensifying its focus on API-enabled cash management solutions for its institutional clients in the CEE region. This includes offering advanced APIs for real-time account information, payment initiation, and comprehensive liquidity management. The strategic rationale is to meet the growing demand from multinational corporations for instant, integrated treasury operations, leveraging the evolving instant payment infrastructures across Europe. This push directly targets large corporates seeking to optimize their working capital, streamline financial processes, and achieve greater automation across multiple CEE markets.

- Enhanced API offerings for real-time cash management.
- Focus on instant payment processing and liquidity visibility.
- Strategic targeting of large corporate clients in CEE.

### SO WHAT FOR RBI CASH MANAGEMENT

CMlplus must ensure its Open Banking API strategy remains highly competitive, particularly in offering real-time data and payment initiation. Citi's inferred push could attract corporates seeking advanced digital integration and faster payment capabilities.

## DB Explores Embedded Finance and Tokenization for Corporates

Building on its digital transformation, Deutsche Bank is investigating how embedded finance can allow corporate clients to access banking functionalities directly within their ERP, TMS, or e-commerce platforms, making financial services invisible and intuitive. While the provided content specifically mentions tokenization in securities, this broader technological push indicates a future where traditional transaction banking services could be delivered via DLT-based solutions, potentially impacting payments and trade finance. For CEE-focused corporates, this means future-proofing their operations with innovative solutions that reduce friction and enhance efficiency, moving beyond traditional banking interfaces. The bank aims to be at the forefront of these evolving financial ecosystems.

- Embedded finance integration
- Exploration of tokenization impact
- Seamless workflow integration

### SO WHAT FOR RBI CASH MANAGEMENT

CMlplus needs to monitor these emerging trends closely, especially embedded finance and DLT, to ensure its platform remains competitive in the long term. Proactive engagement with clients on future needs is crucial for strategic planning.

## HSBC Pioneers Quantum-Enabled Algorithmic Trading with IBM

HSBC's partnership with IBM has led to a groundbreaking trial of quantum-enabled algorithmic trading, specifically for bond markets. This initiative explores how quantum computing can significantly boost the efficiency and sophistication of algorithmic trading, offering unprecedented speed and accuracy in complex calculations. For corporate treasuries, while currently high-end, this technology could eventually translate into more advanced FX hedging, interest rate risk management, and optimized liquidity deployment. It demonstrates HSBC's investment in cutting-edge technology to provide superior financial solutions and maintain a competitive edge in sophisticated treasury services.

- HSBC and IBM collaborated on quantum computing for algorithmic trading.
- Trial focused on enhancing algorithmic bond trading capabilities.
- Aims for greater speed and accuracy in complex financial calculations.

### SO WHAT FOR RBI CASH MANAGEMENT

HSBC's exploration of quantum computing for algorithmic trading signals a long-term vision for highly sophisticated treasury solutions. CMIplus should be aware of these advanced technological frontiers, as they could influence the future demands of large corporate clients for real-time, optimized financial decision-making and risk management, potentially requiring more advanced data analytics and API integrations.

## Citi Drives CEE Treasury Transformation with ISO 20022 & Virtual Accounts

Citi is inferred to be bolstering its treasury solutions in Central and Eastern Europe, with a strong emphasis on the full adoption of ISO 20022 standards for payments and reporting. This initiative is coupled with enhanced virtual account capabilities, allowing corporates to rationalize bank accounts, improve reconciliation, and centralize liquidity management more effectively. The strategic goal is to provide sophisticated tools that help multinational clients in CEE achieve greater operational efficiency, reduce costs, and gain better control over their cash flows in a complex regulatory and multi-currency environment. This aligns with global trends towards standardized, efficient treasury operations.

- Strong advocacy and implementation of ISO 20022 for payments/reporting.
- Expansion of virtual account offerings for treasury optimization.
- Aimed at simplifying multi-currency and multi-entity operations in CEE.

### SO WHAT FOR RBI CASH MANAGEMENT

CMIplus needs to ensure its ISO 20022 readiness and virtual account offerings are robust and competitive, especially for multi-currency environments. Citi's comprehensive approach could challenge CMIplus's position as a regional leader in integrated treasury solutions.

## BNP Paribas Achieves ISO 2022 Milestone for Corporate SWIFT Transactions

BNP Paribas announced a key achievement in its cash management services, successfully processing SWIFT transactions for corporate clients using the ISO 2022 standard. This implementation signifies the bank's commitment to modernizing payment infrastructure and leveraging the enhanced data capabilities of ISO 2022. For corporates, this means greater transparency, improved reconciliation, and increased automation in their international payments. While the article doesn't explicitly mention CEE, the global adoption of ISO 2022 is critical for all international corporates, including those operating in the CEE region, as it streamlines cross-border operations and reduces manual intervention. This strategic move positions BNP Paribas as a leader in advanced payment solutions.

- BNP Paribas has successfully implemented ISO 2022 for SWIFT transactions.
- The focus is on enhancing cash management services for corporate clients.
- This milestone improves data richness, transparency, and automation in global payments.

### SO WHAT FOR RBI CASH MANAGEMENT

CMIplus must ensure its ISO 2022 capabilities, especially for SWIFT and H2H channels, remain competitive and fully leverage the standard's benefits for CEE corporates. This move by BNP Paribas highlights the urgency for CMiplus to communicate its own advanced ISO 2022 features and roadmap to maintain market leadership.

## Intesa Sanpaolo Bolsters CEE Digital Cash Management with API Integration

Intesa Sanpaolo is observed to be strengthening its corporate banking offerings, particularly in the CEE region, by investing in advanced digital cash management solutions. This strategic direction aims to provide multinational corporations and large local enterprises with more efficient and transparent financial operations. Key enhancements are expected in API-driven connectivity for treasury systems and real-time payment capabilities, aligning with global trends like ISO 2022 and instant payments. This move is designed to solidify Intesa Sanpaolo's competitive position in a crucial growth market, leveraging its existing strong network in countries like Croatia, Slovakia, Hungary, and Albania.

- Focus on API-led integration for corporate treasury systems.
- Emphasis on real-time payment processing and liquidity management in CEE.
- Leveraging existing strong CEE network for cross-border services.

### SO WHAT FOR RBI CASH MANAGEMENT

This inferred move directly increases competition for CMiplus, particularly in the API and real-time payment space for large corporates in CEE. CMiplus must ensure its own API offerings and instant payment capabilities remain superior and widely adopted to retain market share.

## EY Four Trends Redefining Cash Management 2025

Cash management is rapidly evolving from transaction-oriented to strategic, data-driven services, necessitating a profound transformation in banking. The future demands banks enrich their value propositions, expand product portfolios, and strengthen client relationships with tailored offerings and experiences. Advanced technologies like AI, ML, and digital assets are creating new possibilities, enabling finance teams to reposition as strategic advisors to the business. However, clients seek control over automation and expect intuitive, personalized experiences, pushing banks to innovate or risk losing relevance to agile FinTechs and nonbanks. Success hinges on banks investing in technology, integrating diverse data, and offering flexible, industry-specific solutions while navigating the increasing regulatory clarity around digital assets.

### KEY STATISTICS

- {'description': 'of survey respondents say digitizing treasury functions is a challenge.', 'value': '73%', 'page': 7}
- {'description': 'of respondents will use managed services from banks to address the challenges of digitization.', 'value': '44%', 'page': 7}
- {'description': 'of CFOs and treasurers are comfortable with customized strategic advice based on data analysis from banks.', 'value': '90%', 'page': 12}
- {'description': 'of corporate treasurers are comfortable using a sector-specific platform tailored to their industry's unique needs.', 'value': '92%', 'page': 17}

### TOP ACTION FOR CMIPLUS

[HIGH] Optimize CMIplus cash management solutions for specific CEE sectors to differentiate and boost client engagement and loyalty.

## McKinsey Global Payments Report 2025

The 2025 McKinsey Global Payments Report highlights a payments landscape defined by increasing fragmentation, the transformative impact of AI, and the growing adoption of digital assets. For CMIplus, this means navigating a multirail ecosystem where interoperability, programmable compliance, and AI-driven efficiencies are paramount for serving large international corporates in CEE. The shift towards lower-yield payment rails and agentic commerce necessitates innovation in monetization and a focus on building trust through transparent, intelligent systems. Success will hinge on adapting our platform to these evolving demands to remain a leading regional player.

### KEY STATISTICS

- Global payments revenue reached \$2.5 trillion in 2024, projected to grow to \$3.0 trillion by 2029.
- EMEA payments revenue grew at a 13% CAGR from 2019-2024, indicating strong regional growth.
- Interest income constituted 46% of total payments revenues in 2024, but is projected to slow to 2% annual growth through 2029.
- Cash usage declined to 46% of worldwide payments in 2024, down from 50% in 2023, reflecting the shift to digital.

### TOP ACTION FOR CMIPLUS

[HIGH] Integrate AI for Intelligent Routing, Fraud Detection, and Liquidity Management

## Journeys to Treasury 2025/26

The 10th anniversary edition of Journeys to Treasury highlights a renewed focus on treasury fundamentals, digital transformation, and strategic evolution. Key themes include the modernization of payments (Instant Payments, VoP, ISO 20022), the growing importance of real-time liquidity and virtual accounts, and the practical application of AI. Corporates are prioritizing robust systems, clean data, and enhanced skills to navigate a complex, interconnected financial environment, moving treasury from an operational role to a strategic business partner.

### KEY STATISTICS

→ {'statistic': 'Cash flow forecasting is the number one priority for 30.5% of treasurers.', 'source': 'EACT Treasury Survey 2025'}

→ {'statistic': 'Reviewing or replacing treasury technology infrastructure is the third-highest priority.', 'source': 'EACT Treasury Survey 2025'}

→ {'statistic': '27.3% of treasurers cite inaccurate forecasting as a leading challenge for centralisation.', 'source': 'EACT Treasury Survey 2025'}

→ {'statistic': '38.5% of respondents cite difficulties in standardising processes as their most significant obstacle to centralisation.', 'source': 'EACT Treasury Survey 2025'}

### TOP ACTION FOR CMIPLUS

[HIGH] Enhance Instant Payments & VoP Readiness for CEE Corporates

## PwC Global Treasury Survey 2025

The provided text does not contain the actual content or findings of the 'PwC Global Treasury Survey 2025'. Instead, it appears to be a navigation structure or partial webpage content from PwC's website, detailing various services, industries, and insights offered by PwC. Consequently, a strategic analysis for RBI's CMIplus platform, including key statistics, themes, and actionable recommendations, cannot be generated from the given information. To perform the requested comprehensive analysis, the full content of the PwC Global Treasury Survey is essential.
