PSD3 and PSR Implementation: A New Era for European Payments

The new PSD3 and PSR framework introduces stricter security measures for payment transactions, including enhanced Strong Customer Authentication (SCA) requirements and improved fraud detection mechanisms. A key objective is to combat payment fraud more effectively while also promoting competition and innovation in the payments sector. The regulations are expected to streamline processes for payment service providers and improve the customer experience. The implementation timeline is still being finalized, but a phased approach is anticipated, with significant changes likely to come into effect over the next few years. This will necessitate updates to existing payment infrastructure and operational procedures for many financial institutions and corporate treasuries.

→ PSD3 and PSR package approved by European Parliament.

→ Focus on enhanced payment security and fraud prevention.

→ Aims to foster competition and innovation in payments.

SO WHAT FOR RBI CASH MANAGEMENT

PSD3 and PSR will necessitate updates to CMIplus platform's security protocols and transaction processing capabilities. RBI Cash Management will need to ensure compliance with new SCA requirements and potentially adapt its fraud monitoring systems to align with the enhanced regulatory landscape.

Instant Payments Gain Traction: SEPA's Real-Time Evolution

Instant payments, also known as real-time payments, are becoming increasingly prevalent within the Single Euro Payments Area (SEPA). This shift is fueled by the desire for faster settlement and improved liquidity management for businesses. Corporates are exploring how to leverage instant payment capabilities for various use cases, including supply chain finance, payroll, and emergency payments. The underlying infrastructure is maturing, with more banks and payment service providers offering robust instant payment solutions. This evolution presents opportunities for enhanced efficiency and new business models, but also requires careful consideration of operational readiness and risk management.

→ Growing adoption of instant payments in SEPA.

→ Driven by demand for immediate fund availability.

→ Enables faster settlement and improved liquidity management.

SO WHAT FOR RBI CASH MANAGEMENT

CMIplus is well-positioned to support the increasing demand for instant payments within CEE. RBI Cash Management can leverage this trend to offer enhanced real-time transaction capabilities to its corporate clients, improving their liquidity visibility and operational efficiency.

PSD3: European Commission Proposes Sweeping Payment Services Directive Updates

The proposed Payment Services Directive 3 (PSD3) and a new Payment Services Regulation (PSR) aim to modernize the EU's payment landscape. The initiative focuses on improving fraud prevention, particularly for instant payments, and further enabling Open Banking through standardized APIs. PSD3 will also address the challenges posed by new payment service providers and ensure a level playing field. The regulation seeks to harmonize rules across member states, making cross-border payments more efficient and secure. This is a significant step towards a more integrated and secure European payments ecosystem.

- PSD3 proposal aims to enhance payment security and foster innovation.
- Strengthened fraud prevention measures are a key focus.
- Promotes further adoption and standardization of Open Banking APIs.

SO WHAT FOR RBI CASH MANAGEMENT

PSD3 will have a direct impact on CMiplus, requiring updates to ensure compliance with new security and Open Banking mandates. The focus on fraud prevention for instant payments is particularly relevant given CMiplus's support for real-time transactions in CEE.

ISO 20022 Adoption Accelerates: CEE Corporates Embrace New Global Standard

Corporates in the CEE region are increasingly migrating to ISO 20022 for their payment transactions, moving away from legacy formats like MT messages. This shift is crucial for leveraging the enhanced data capabilities of the standard, enabling better reconciliation, improved fraud detection, and more efficient treasury operations. Banks are supporting this transition by offering ISO 20022 compliant services, facilitating a smoother migration for their corporate clients. The global nature of ISO 20022 also promises greater interoperability across different payment systems and geographies.

- CEE corporates are accelerating ISO 20022 adoption.
- The standard offers richer data for payments and reconciliation.
- Banks are actively supporting corporate migration efforts.

SO WHAT FOR RBI CASH MANAGEMENT

CMiplus's continued support and promotion of ISO 20022 are critical for its CEE client base. This trend reinforces the need for robust ISO 20022 capabilities within the platform to handle richer data and ensure seamless integration with corporate ERP/TMS systems.

Open Banking APIs Drive Innovation in CEE Treasury and Cash Management

Open Banking APIs are becoming instrumental for CEE corporates seeking to gain real-time insights into their cash positions and optimize liquidity management. These APIs enable seamless integration between bank accounts and corporate treasury systems, facilitating automated cash forecasting and more agile decision-making. The trend is also fostering innovation in areas like virtual accounts and enhanced payment initiation services. As more banks in the region offer robust API solutions, corporates are leveraging this technology to streamline operations and improve financial control.

- Open Banking APIs are transforming CEE treasury operations.
- Real-time data access enhances liquidity visibility and control.
- APIs facilitate integration with corporate treasury systems.

SO WHAT FOR RBI CASH MANAGEMENT

CMlplus's strategic focus on Open Banking APIs aligns perfectly with this CEE trend. Enhancing API capabilities will be crucial for CMlplus to provide its clients with the real-time data and integration necessary to compete and optimize their cash management strategies.

PSD3 Finalized: Major Overhaul of EU Payment Services Regulation

The final text of the Payment Services Directive 3 (PSD3) has been agreed upon by the European Parliament, marking a crucial step in the evolution of payment regulation within the EU. This directive aims to modernize the existing framework, addressing the rapid advancements in financial technology and evolving consumer needs. Key provisions include strengthening consumer rights, improving fraud prevention measures, and further promoting competition and innovation in the payments sector. A significant focus is placed on enhancing the security and efficiency of payment services, while also clarifying the rules for payment initiation and account information services. The directive is expected to come into effect in the coming years, requiring significant adaptation from financial institutions across the CEE region.

- PSD3 finalized by European Parliament.
- Focus on enhanced consumer protection.
- Strengthened framework for Open Banking.

SO WHAT FOR RBI CASH MANAGEMENT

PSD3 will necessitate updates to CMlplus's compliance and security protocols, particularly concerning Open Banking APIs and consumer data handling. The directive's focus on fraud prevention will also be critical for ensuring the integrity of payment services offered through the platform.

Instant Payments Expansion Across CEE: New Opportunities and Challenges

The landscape of payments in the CEE region is rapidly transforming with the increasing adoption of instant payment schemes. This trend is driven by consumer demand for immediate fund availability and the push for greater efficiency in financial transactions. While many countries are making significant strides, the pace of adoption and the specific functionalities offered can vary. Ensuring seamless interoperability between different national instant payment systems and with existing payment rails is a key challenge. Furthermore, harmonizing regulatory frameworks to support these real-time flows while maintaining robust security and fraud prevention measures is crucial for sustained growth.

- Instant payment adoption accelerating in CEE.
- Driven by consumer demand for real-time transactions.
- Interoperability between systems is a key challenge.

SO WHAT FOR RBI CASH MANAGEMENT

CMlplus can leverage the expansion of instant payments to offer enhanced real-time liquidity management solutions to its CEE clients. Ensuring seamless integration with local instant payment infrastructures will be vital for CMlplus to maintain its competitive edge.

Nexi and Visa Partner to Scale German Card Issuing for Banks

The strategic partnership between Nexi, a leading European PayTech, and Visa, a global payments technology company, focuses on scaling managed card issuing solutions specifically for banks operating in Germany. This initiative is designed to empower banks to more efficiently launch and manage their card programs, leveraging Nexi's processing capabilities and Visa's extensive network. The collaboration is expected to simplify the operational complexities associated with card issuance, allowing banks to focus on customer acquisition and service. For corporate clients, this could mean faster access to new card products and more tailored solutions. The partnership underscores a trend towards specialized providers offering end-to-end solutions to banks, enabling them to compete effectively in the evolving payments landscape.

- Partnership between Nexi and Visa.
- Focus on Germany's banking sector.
- Objective: Scale managed card issuing solutions.

SO WHAT FOR RBI CASH MANAGEMENT

This partnership is highly relevant for RBI Cash Management as it directly impacts the card issuing capabilities of banks in a key European market. CMlplus clients, particularly large corporates with operations in Germany, could benefit from more efficient and innovative card programs offered by their banking partners, including RBI's network banks. RBI should monitor such partnerships to ensure CMlplus can integrate with or leverage these enhanced offerings for its corporate treasury clients.

ISO 2022 Migration: A Global Standard for Financial Messaging

ISO 2022 is a global standard for electronic data interchange between organizations, particularly in the financial industry. Its adoption is a significant undertaking, aiming to replace older, proprietary messaging formats with a unified, XML-based system. For corporate treasuries and banks, this means enhanced data fields, improved transaction reporting, and greater automation possibilities. The migration facilitates better reconciliation, more sophisticated fraud detection, and seamless integration with enterprise resource planning (ERP) and treasury management systems (TMS). While the transition presents challenges, the long-term benefits of standardized, rich data are substantial for improving efficiency and transparency in financial operations.

- ISO 2022 is a global standard for financial messaging.
- Replaces older, proprietary messaging formats.
- Offers richer data fields and improved interoperability.

SO WHAT FOR RBI CASH MANAGEMENT

The continued rollout and adoption of ISO 2022 is a core strategic focus for CMlplus. RBI Cash Management is committed to supporting this standard across its network, enabling clients to benefit from richer data for improved reconciliation, reporting, and overall treasury operations.

ISO 2022 Migration Progress: Impact on CEE Corporates and Banks

The transition to the ISO 2022 messaging standard is a fundamental shift in how financial data is communicated globally. For the CEE region, this migration presents both opportunities and complexities. Corporates can expect richer data fields in payment messages, enabling more sophisticated reconciliation, improved fraud detection, and enhanced treasury management capabilities. Banks are investing heavily in upgrading their systems to support the new standard, which is crucial for maintaining interoperability and compliance with evolving regulatory requirements. The full benefits of ISO 2022 will be realized as adoption becomes more widespread across all market participants.

- ISO 2022 migration is a global trend.
- Offers richer data for corporate treasury.
- Enhances reconciliation and fraud detection capabilities.

SO WHAT FOR RBI CASH MANAGEMENT

CMlplus's continued support and promotion of ISO 2022 are critical for its CEE clients. Ensuring that CMlplus can fully leverage the enhanced data capabilities of ISO 2022 will be key to providing advanced treasury and cash management solutions.

ECB Prepares for Future Banknotes: Redesign Process Underway

The European Central Bank (ECB) has initiated the redesign process for the next generation of euro banknotes, with a target completion date of January 1, 2026. This forward-looking project aims to ensure the euro remains a secure, modern, and trusted means of payment. The redesign will likely involve incorporating advanced security features to combat counterfeiting and may also consider themes that resonate with European citizens. The process is expected to be inclusive, potentially involving public consultation on design elements. The ECB's commitment to the physical euro remains strong, with this redesign underscoring its dedication to maintaining the integrity and relevance of cash.

- ECB is undertaking a redesign process for future euro banknotes.
- Target completion date for the redesign is January 1, 2026.
- Focus on modernizing currency and enhancing security features.

SO WHAT FOR RBI CASH MANAGEMENT

The upcoming redesign of euro banknotes is a significant development for cash management operations across CEE. CMIplus and its network banks will need to prepare for the introduction of new denominations, security features, and potentially updated handling procedures for ATMs and cash processing. This ensures continued compliance and efficient cash circulation.

Enfuce Joins Mastercard Product Express for European Business Cards

Enfuce, a leading European card issuer and payment processor, has joined Mastercard's Product Express platform. This strategic move is designed to significantly accelerate the launch of new business card programs throughout Europe. By leveraging Mastercard's platform, Enfuce can offer banks and fintechs a streamlined pathway to introduce innovative corporate card solutions, reducing time-to-market and operational hurdles. This partnership is particularly impactful for the European market, where demand for flexible and efficient business payment solutions is growing. It enables faster deployment of tailored card products, supporting various corporate needs from expense management to multi-currency transactions. The initiative reflects a broader industry trend towards collaborative ecosystems that empower financial institutions to enhance their offerings and respond quickly to market demands.

- Enfuce partners with Mastercard Product Express.
- Focus on European business cards.
- Goal: Accelerate business card program launches.

SO WHAT FOR RBI CASH MANAGEMENT

This development is crucial for RBI Cash Management as it directly supports the faster deployment of corporate card programs in Europe. CMIplus clients rely on efficient payment instruments, and enhanced business card offerings from banks, including RBI's network, can improve their cash flow and expense management. RBI should explore how this platform can be leveraged by its CEE network banks to provide competitive and agile corporate card solutions, aligning with CMIplus's multi-currency and corporate treasury focus.

Stablecoins: Risks and Opportunities for Corporate Treasury

Stablecoins, as a form of digital currency pegged to a stable asset like a fiat currency, present intriguing possibilities for treasury functions, including faster cross-border payments and improved liquidity management. However, the article also emphasizes significant risks. These include regulatory uncertainty, potential for volatility if the peg is broken, cybersecurity threats, and the operational complexities of integrating new digital assets into existing treasury systems. It advises treasurers to conduct thorough due diligence and stay abreast of evolving regulatory landscapes before considering stablecoin integration.

- Stablecoins offer potential for faster payments.
- Improved liquidity management is a possible benefit.
- Regulatory uncertainty is a major risk.

SO WHAT FOR RBI CASH MANAGEMENT

This topic is highly relevant to CMlplus as it addresses emerging payment technologies that could impact corporate treasury. Understanding stablecoin risks and opportunities is crucial for advising clients on future payment strategies and ensuring the platform remains competitive and compliant with evolving financial landscapes.

Autonomous Treasury Fixes Slow Cash Checks

Autonomous treasury leverages advanced technologies like AI, machine learning, and automation to streamline traditionally manual and time-consuming cash management tasks. This includes automated reconciliation, forecasting, and payment processing, directly addressing the issue of 'slow cash checks' that often hinder corporate treasuries. By minimizing human intervention, these systems reduce errors, enhance transparency, and free up treasury staff for more strategic activities. The adoption of such technologies is crucial for corporates seeking to optimize liquidity, improve working capital, and achieve real-time visibility into their financial positions. This is particularly relevant in complex multi-bank and multi-currency environments prevalent in regions like CEE.

- Autonomous treasury utilizes AI and machine learning for cash management.
- Aims to eliminate manual 'slow cash checks' and improve efficiency.
- Automates reconciliation, forecasting, and payment processing.

SO WHAT FOR RBI CASH MANAGEMENT

For RBI Cash Management and the CMlplus platform, this article underscores the growing demand for advanced automation in corporate treasury. CMlplus should explore integrating AI-driven features for reconciliation, forecasting, and payment initiation to meet client expectations for autonomous treasury functions, enhancing its value proposition in the CEE market.

ECB Explores Research Access to Confidential Statistical Data

The European Central Bank (ECB) announced a pilot project designed to grant researchers access to confidential statistical data. This move is intended to facilitate more in-depth economic research and analysis, potentially leading to new insights into monetary policy, financial stability, and the broader economy. The project will likely involve stringent data protection measures and controlled access protocols to ensure the confidentiality of the data. The ECB's commitment to transparency and data-driven research underpins this initiative, which could have long-term implications for economic scholarship and policy formulation within the Eurosystem. Further details on the scope and methodology of the pilot are expected to be released.

- ECB launches pilot project for research access to confidential statistical data.
- Aims to foster deeper economic analysis and understanding.
- Will involve stringent data protection measures and controlled access.

SO WHAT FOR RBI CASH MANAGEMENT

This initiative could lead to enhanced economic insights relevant to CEE markets, potentially influencing future monetary policy and regulatory considerations that impact cash management. Access to more granular data might also inform strategic decisions for CMIplus regarding liquidity management and payment flows.

Digital Payments in Africa Face Challenges, Despite Growth

The article highlights that while digital payment solutions are expanding across the African continent, persistent challenges hinder their full potential. These include issues related to infrastructure, regulatory frameworks, and varying levels of digital literacy among the population. Despite these obstacles, the demand for efficient and accessible payment methods remains high, driving continued investment and development in the sector. The narrative suggests a complex landscape where progress is being made, but significant work is still required to overcome systemic barriers.

- Digital payments in Africa face persistent challenges.
- Growth and innovation are occurring in the sector.
- Infrastructure and regulatory frameworks are key hurdles.

SO WHAT FOR RBI CASH MANAGEMENT

This item is relevant for CMIplus as it highlights potential challenges and opportunities for digital payment adoption in emerging markets within or adjacent to the CEE region. Understanding these dynamics is crucial for developing tailored payment solutions and supporting clients operating in or expanding into Africa.

ECB's Climate Change Impact Analysis on Banks Published

The European Central Bank (ECB) has released a blog post on April 18, 2024, discussing the impact of climate change on banks. This publication is a key component of the ECB's ongoing efforts to understand and manage climate-related financial risks within the banking sector. The analysis likely covers both physical risks (e.g., extreme weather events) and transition risks (e.g., policy changes and technological shifts) that can affect banks' balance sheets and profitability. The ECB's work in this area is crucial for ensuring the resilience of the financial system and promoting a sustainable economic transition. This information is vital for banks to adapt their strategies and risk management frameworks.

- ECB published a blog post on climate change's impact on banks.
- Analysis covers physical and transition risks.
- Part of ECB's broader focus on climate-related financial risks.

SO WHAT FOR RBI CASH MANAGEMENT

While not directly related to payment regulations, the ECB's focus on climate change impacts on banks is a growing area of concern for financial institutions. CMIplus and RBI should be aware of how these macro trends might influence regulatory expectations and the broader financial landscape in CEE, potentially affecting lending practices and investment strategies that indirectly impact corporate cash management.

Oliver Wyman Corporate Banking | 2024-01-01 | #01

European Wholesale Banks Must Seize Opportunity for Future Growth

The 'How European Wholesale Banks Can Seize The Moment' report highlights a significant shift in the European wholesale banking sector. After a prolonged period of underperformance, the industry is entering a phase where strategic agility and proactive engagement can unlock substantial growth. This outlook suggests that banks which effectively adapt their business models, embrace digital transformation, and focus on client-centric solutions will be best positioned to thrive. The report likely delves into specific areas of opportunity, such as leveraging new technologies, optimizing operational efficiency, and responding to changing regulatory environments. By understanding and acting upon these emerging trends, European wholesale banks can move beyond historical challenges and build a more robust and profitable future.

- European wholesale banks are moving beyond a period of underperformance.
- A 'better future' is anticipated for the sector.
- Strategic adaptation is crucial for seizing growth opportunities.

SO WHAT FOR RBI CASH MANAGEMENT

This insight underscores the need for CMIplus to be at the forefront of digital transformation and client-centric solutions. Focusing on how European banks are adapting can inform our strategy for enhancing CEE corporate banking offerings, particularly in areas like real-time payments and integrated treasury solutions.

URGENT

EY Future of Treasury | 2026-04-27 | #02

AI Revolutionizes Treasury: Predictive Insights and Automation Drive Efficiency

The report highlights the increasing adoption of Artificial Intelligence (AI) within treasury operations. AI's capabilities in machine learning and natural language processing are being leveraged for advanced cash flow forecasting, enabling more accurate predictions and proactive liquidity management. Furthermore, AI is automating repetitive tasks such as reconciliation and data entry, freeing up treasury professionals for higher-value activities. This technological advancement is crucial for treasurers to navigate complex financial landscapes and enhance their strategic contribution to the organization. The EY Future of Treasury report emphasizes that banks need to integrate AI-driven solutions to offer enhanced value to their corporate clients.

- AI enables predictive cash flow forecasting with enhanced accuracy.
- Automation of routine treasury tasks through AI increases operational efficiency.
- Treasury professionals can shift focus to strategic analysis and risk mitigation.

SO WHAT FOR RBI CASH MANAGEMENT

Integrating AI capabilities into CMIplus can significantly enhance our predictive cash flow forecasting for CEE clients, offering more proactive liquidity management. This aligns with the trend of treasurers seeking advanced analytical tools and positions CMIplus as a forward-thinking platform.

Digital Assets and Blockchain Reshape Payment and Treasury Landscapes

The EY report underscores the growing influence of digital assets and blockchain technology on the treasury function. These innovations offer the potential for faster, more transparent, and cost-effective cross-border transactions, which are critical for multinational corporations. For treasury departments, this translates to improved liquidity management, reduced settlement times, and new avenues for financial innovation. Banks are actively investigating how to integrate these technologies into their service offerings, including the potential for central bank digital currencies (CBDCs) and tokenized assets. This evolution necessitates a strategic approach to digital asset management and blockchain integration within banking platforms.

- Digital assets and blockchain can accelerate cross-border payment efficiency.
- Improved liquidity management is a key benefit of these emerging technologies.
- Banks are exploring CBDCs and tokenized assets for treasury services.

SO WHAT FOR RBI CASH MANAGEMENT

Exploring the integration of digital asset capabilities and blockchain solutions within CMlplus could offer our CEE clients enhanced cross-border payment efficiency and novel liquidity management tools. This aligns with the global trend towards digital transformation in finance and positions RBI as an innovator in the region.

AI and Automation Revolutionize Treasury Operations for Enhanced Efficiency

The PwC global treasury survey highlights a significant trend towards the integration of Artificial Intelligence (AI) and automation within treasury functions. Over 350 treasurers participated in the survey, revealing a growing reliance on these technologies to manage complex financial operations. Key areas of impact include enhanced cash visibility, improved forecasting accuracy, and the automation of routine tasks, freeing up treasury professionals for more strategic initiatives. The adoption of AI is not just about efficiency; it's about enabling treasurers to derive more value from their data and make more informed decisions in a rapidly evolving financial landscape.

- AI and automation are key drivers of treasury modernization.
- Enhanced cash visibility is a primary benefit of these technologies.
- Forecasting accuracy is significantly improved through AI.

SO WHAT FOR RBI CASH MANAGEMENT

The increasing adoption of AI and automation in treasury presents a significant opportunity for CMlplus. Integrating AI-powered insights and automation capabilities into the platform can enhance our value proposition for CEE corporates, particularly in areas like predictive liquidity management and fraud detection.

API Banking and Open Banking Drive Real-Time Cash Visibility and Control

The survey underscores the critical role of API banking and Open Banking in modern treasury operations. These technologies facilitate seamless data exchange between banks and corporates, providing treasurers with immediate access to account information and transaction data. This real-time visibility is essential for effective liquidity management, timely decision-making, and proactive risk mitigation. The shift towards API-driven connectivity is a fundamental change in how banks and corporates interact, moving towards a more integrated and dynamic financial ecosystem.

- API banking is crucial for real-time data exchange.
- Open Banking enhances corporate access to financial data.
- Real-time visibility is key for liquidity management.

SO WHAT FOR RBI CASH MANAGEMENT

CMlplus's strategic focus on API banking and adherence to Open Banking principles is well-aligned with these findings. Enhancing our API capabilities and promoting their adoption among CEE clients will be critical for delivering the real-time cash visibility and control they increasingly demand.

AI Governance Crucial for Financial Services Amidst Rapid Adoption

The rapid integration of Artificial Intelligence (AI) across financial services necessitates a proactive approach to governance. EY highlights the critical need for financial institutions to establish comprehensive AI governance frameworks that address ethical considerations, data privacy, bias mitigation, and accountability. These frameworks should guide the development, deployment, and ongoing monitoring of AI systems to ensure they align with regulatory expectations and business objectives. Failure to implement strong governance can lead to reputational damage, regulatory penalties, and operational disruptions. The report emphasizes that a well-defined AI governance strategy will be a key differentiator for firms in 2026.

- Establish clear ethical guidelines for AI development and deployment.
- Implement robust data privacy and security measures for AI systems.
- Develop mechanisms for bias detection and mitigation in AI algorithms.

SO WHAT FOR RBI CASH MANAGEMENT

For RBI Cash Management and CMlplus, this means prioritizing the development and implementation of AI-powered solutions with strong governance. This includes ensuring any AI used in fraud detection, liquidity forecasting, or customer service is transparent, ethical, and compliant with evolving regulations.

Verification of Payee Crucial for Fraud-Conscious Treasurers Amidst Payment Evolution

This insight emphasizes the growing importance of robust fraud detection mechanisms within corporate treasury operations. As payment landscapes evolve with increased adoption of real-time and instant payment solutions, the risk of sophisticated fraud attempts also escalates. The GLEIF document, referenced in the EACT announcement, likely details how tools like Verification of Payee can significantly mitigate these risks by ensuring payments are directed to the correct intended recipient. This proactive approach is becoming a necessity for treasurers aiming to protect their organizations from financial losses and reputational damage.

- Verification of Payee (VoP) is a crucial tool for fraud prevention.
- Increased adoption of real-time and instant payments necessitates enhanced fraud detection.
- Treasurers must proactively implement solutions to ensure payment accuracy.

SO WHAT FOR RBI CASH MANAGEMENT

The increasing focus on Verification of Payee aligns with CMIplus's strategic direction to enhance payment security and fraud prevention. Integrating robust VoP capabilities within the platform will be essential to meet evolving corporate treasury needs and regulatory expectations in the CEE region.

AI Ambition Reshapes Banking: Strategic Imperative for Future Growth

The 2026 Deloitte Banking Outlook highlights AI ambition as a core driver for banking evolution, demanding bold choices from financial institutions. Banks must strategically invest in AI to optimize processes, from risk management and fraud detection to personalized client services and cash flow forecasting. This involves not only adopting new technologies but also transforming organizational structures and skill sets to fully leverage AI's potential. The focus is on creating intelligent, data-driven platforms that can adapt to rapid market changes and deliver superior value. Successful AI integration will differentiate leaders in a competitive landscape, enabling more agile and responsive operations.

- AI integration is a strategic imperative for banks in 2026.
- Focus areas include operational efficiency, risk management, and client experience.
- Organizational and skill transformation are critical for AI adoption.

SO WHAT FOR RBI CASH MANAGEMENT

CMIplus must prioritize AI integration to enhance its cash management offerings, particularly in intelligent cash forecasting, fraud analytics, and automated reconciliation. Exploring AI-powered APIs for corporate treasury systems will provide advanced, real-time insights and operational efficiencies for CEE clients.

Wholesale Banking Outlook 2024: Extending Credit Strategies

The 'Extending Credit: Wholesale Banking Outlook 2024' report likely provides a forward-looking perspective on how wholesale banks should approach credit provision in the coming year. In a dynamic economic environment, the ability to effectively extend credit is paramount for supporting corporate clients and driving bank revenue. This outlook may cover topics such as risk assessment in volatile markets, the role of technology in credit origination and management, and the development of new credit products. For CEE markets, this could translate to a focus on tailored credit solutions that support regional growth and investment, potentially integrating with digital platforms for enhanced client experience and efficiency.

- Extending credit is a key strategic focus for wholesale banks in 2024.
- Adapting credit strategies to current market conditions is essential.
- Technology plays a vital role in credit origination and management.

SO WHAT FOR RBI CASH MANAGEMENT

This insight is relevant for CMIplus as it highlights the interconnectedness of credit and cash management. We should consider how our platform can better support clients in managing their credit lines and how integrated financing solutions can be offered, especially in the CEE region where credit access can be a key differentiator.

Open Banking APIs Drive Treasury Transformation and Real-Time Visibility

The EY Future of Treasury report emphasizes the transformative impact of Open Banking APIs on corporate treasury. By enabling secure data sharing between banks and corporates, APIs provide treasurers with unprecedented real-time visibility into their accounts and transactions across multiple banking relationships. This enhanced data flow supports more agile liquidity management, facilitates sophisticated cash pooling strategies, and allows for immediate detection of anomalies. The adoption of APIs is a key driver for treasury modernization, moving away from traditional batch processing towards a more dynamic and responsive treasury function. Banks that embrace API strategies are better positioned to meet the evolving needs of their corporate clients for integrated financial data.

- Open Banking APIs provide real-time global cash position visibility.
- Enhanced data access supports dynamic liquidity management strategies.
- APIs facilitate more sophisticated cash pooling and reconciliation.

SO WHAT FOR RBI CASH MANAGEMENT

Expanding our Open Banking API offerings within CMIplus is critical for providing CEE clients with the real-time visibility and control they demand. This will enable more efficient cash pooling and liquidity management, directly addressing the 'Voice of the Treasurer' and strengthening our platform's competitive edge.

Treasury Management Systems (TMS) Adoption Accelerates for Strategic Advantage

The PwC survey indicates a strong and growing trend in the adoption of Treasury Management Systems (TMS). Over 350 treasurers reported increased investment and utilization of TMS platforms to manage their financial operations more effectively. These systems are instrumental in centralizing cash management, optimizing liquidity, managing financial risks, and providing comprehensive reporting. The strategic advantage derived from a robust TMS is becoming increasingly apparent, enabling treasurers to move beyond operational tasks and focus on value-added strategic contributions to the business.

- TMS adoption is a key trend in corporate treasury.
- TMS centralizes treasury functions for better control.
- Optimizing liquidity is a primary benefit of TMS.

SO WHAT FOR RBI CASH MANAGEMENT

The increasing reliance on TMS platforms by our target CEE clients means CMIplus must ensure seamless integration and data exchange with these systems. Strengthening our TMS connectivity and offering features that complement TMS functionalities will be vital for maintaining our competitive edge.

PSD3 and Open Banking Evolution Drive Payment Innovation and Competition

The evolution of payment services regulation, particularly with the anticipated PSD3, will continue to reshape the financial landscape. EY anticipates that PSD3 will build upon the foundations of PSD2, likely introducing further mandates for data sharing and payment initiation services. This will intensify competition by enabling a wider range of third-party providers to offer innovative payment solutions and access to financial data. Financial institutions need to strategically position themselves to leverage these changes, either by enhancing their own API offerings or by collaborating with fintechs. The focus will be on delivering seamless, secure, and customer-centric payment experiences in an increasingly interconnected ecosystem.

- PSD3 will likely expand Open Banking mandates beyond current scope.
- Increased competition from third-party payment providers is expected.
- Focus on enhanced data sharing and payment initiation services.

SO WHAT FOR RBI CASH MANAGEMENT

RBI Cash Management and CMIplus must prepare for the implications of PSD3 by enhancing API capabilities and exploring new payment initiation services. This will enable CMIplus to offer more integrated and innovative payment solutions to corporate clients, fostering greater efficiency and competitiveness in the CEE market.

EACT Survey 2024 Reveals Key Priorities for European Corporate Treasurers

This survey provides a valuable snapshot of the current treasury landscape in Europe, reflecting the priorities of major international corporations. With around 250 responses from Group Treasurers, the results offer a data-driven perspective on the challenges and opportunities facing the profession. The survey likely touches upon critical themes such as digitalization, liquidity management, risk mitigation, and the adoption of new payment technologies, offering actionable intelligence for treasury departments and their banking partners.

- Survey collected data from ~250 Group Treasurers across Europe.
- Highlights key strategic priorities for corporate treasury functions.
- Provides insights into current challenges and opportunities.

SO WHAT FOR RBI CASH MANAGEMENT

Understanding the key priorities identified in the EACT survey is vital for CMIplus to align its product development and service offerings with the evolving needs of CEE corporates. This data will help prioritize features related to digitalization, payment transformation, and liquidity management within the CMIplus platform.

Stablecoins Emerge as Disruptive Force in Global Payments

Deloitte's 2026 outlook identifies the disruptive potential of stablecoins as a key challenge and opportunity for banks. These digital currencies, pegged to fiat money or other assets, could fundamentally alter the landscape of cross-border payments, remittances, and corporate treasury operations by offering faster, cheaper, and more transparent transactions. Banks need to assess the regulatory implications, technological infrastructure requirements, and competitive threats posed by stablecoins. Strategic responses may include exploring partnerships, developing proprietary stablecoin solutions, or integrating stablecoin payment rails into existing platforms to maintain relevance and capture new market share.

- Stablecoins are a significant disruptive force for traditional banking.
- They impact cross-border payments, remittances, and treasury.
- Banks must evaluate regulatory, technological, and competitive aspects.

SO WHAT FOR RBI CASH MANAGEMENT

RBI Cash Management should closely monitor the evolution and adoption of stablecoins, especially for multi-currency payments and cross-border transactions within CEE. While not an immediate CMIplus feature, understanding their potential impact on FX, liquidity, and future payment rails is crucial for long-term platform strategy and client advisory.

Private Credit's Next Act: Tapping into Asset-Based Lending

The 'Private Credit's Next Act: Why private credit is tapping into asset-based lending' piece suggests a significant evolution within the private credit landscape. Asset-based lending, which traditionally focuses on providing financing secured by a company's assets, is becoming a more prominent strategy for private credit funds. This move indicates a diversification of strategies and a search for yield and new market segments. It implies that private credit providers are becoming more sophisticated in their approach, looking to unlock value by financing businesses based on their tangible and intangible assets. This could lead to increased competition and innovation in the ABL space, potentially impacting how corporate clients access financing and how banks structure their own ABL offerings.

- Private credit is actively exploring asset-based lending (ABL).
- ABL represents a significant growth opportunity for private credit.
- This trend signals a maturing and diversifying private credit market.

SO WHAT FOR RBI CASH MANAGEMENT

Understanding the growth of private credit in ABL is crucial for CMIplus. It highlights potential new financing structures for corporates and may influence how we integrate lending and cash management services, especially for clients seeking flexible, asset-backed financing solutions.

ECB Payment Regulation | 2023-01-01 | #01

ECB announces Bulgaria's euro adoption in 2026

EURO ADOPTION

Deadline: 2026-01-01

The European Central Bank (ECB) has confirmed that Bulgaria will adopt the euro as its currency on January 1, 2026. This decision follows Bulgaria's successful convergence with the economic criteria required for euro adoption. The transition will involve the introduction of euro banknotes and coins, and the phasing out of the Bulgarian lev. This integration is expected to bring economic benefits to Bulgaria, including increased price transparency, reduced transaction costs, and enhanced trade and investment within the Eurozone. For businesses operating in Bulgaria and across the CEE region, this necessitates preparations for a single currency environment.

- Bulgaria to adopt the euro on January 1, 2026.
- Confirmation of Bulgaria's convergence with euro adoption criteria.
- Involves introduction of euro banknotes/coins and phasing out of lev.

SO WHAT FOR RBI CASH MANAGEMENT

RBI CMiplus needs to prepare for the operational and technical implications of Bulgaria's euro adoption. This includes updating systems for multi-currency processing, ensuring compliance with any new reporting requirements, and advising corporate clients on the transition.

Euro Banking Association | 2025-11-20 | #02

EU regulatory developments impact liquidity management, instant payments, and PSD3

LIQUIDITY MANAGEMENT

The Euro Banking Association (EBA) has published a report by its Liquidity Management Working Group (LMWG) analyzing the significant impact of key EU regulatory initiatives on liquidity management. The Instant Payments Regulation (IPR), the proposed Payment Services Regulation (PSR), and the upcoming Payment Services Directive 3 (PSD3) are expected to drive substantial changes. These measures are designed to accelerate the uptake of instant payments across the market, foster greater competition among payment service providers, and fundamentally alter how liquidity is managed. The report provides insights into how financial institutions need to adapt their strategies and operations to comply with these evolving regulatory landscapes.

- Instant Payments Regulation (IPR) to accelerate uptake of instant payments.
- Proposed Payment Services Regulation (PSR) and PSD3 to transform liquidity management.
- Focus on creating a level playing field among market participants.

SO WHAT FOR RBI CASH MANAGEMENT

CMiplus needs to assess the implications of IPR, PSR, and PSD3 on liquidity management services offered to CEE corporates. This includes understanding how increased instant payment volumes and potential new payment initiation methods will affect treasury operations and liquidity forecasting.

FIDA regulation to act as catalyst for open data economy, EBA report reveals

OPEN BANKING

The Euro Banking Association (EBA) has released a report detailing the findings of a survey on the proposed Financial Data Access (FIDA) regulation. Experts from financial institutions across Europe were consulted to gauge their perspectives on the potential benefits and hurdles associated with FIDA. The report highlights FIDA's role as a potential catalyst for an open data economy within the financial sector. It provides actionable recommendations and frameworks designed to assist market participants in their preparation for the upcoming implementation of FIDA, emphasizing the need for proactive engagement.

- FIDA proposed regulation to foster an open data economy.
- Surveyed financial institutions on opportunities and challenges.
- Offers practical recommendations for market participants.

SO WHAT FOR RBI CASH MANAGEMENT

CMIplus should analyze the implications of FIDA for data sharing and access for corporate clients in CEE. This includes understanding how FIDA might impact the development and offering of open banking APIs and data-driven treasury solutions.

ECB launches pilot for research access to confidential statistical data

STATISTICS & RESEARCH

The European Central Bank (ECB) has announced a pilot project that will allow researchers controlled access to confidential statistical data. This move is intended to facilitate more in-depth analysis and research into economic and financial matters. The project aims to balance the need for data accessibility with the imperative of maintaining data confidentiality and privacy. Specific details on the types of data, eligibility criteria for researchers, and the access mechanisms are expected to be released as the pilot progresses. This initiative aligns with the ECB's commitment to promoting research and enhancing the understanding of the Eurosystem's operations and the broader economy.

- Pilot project for research access to confidential statistical data launched.
- Aims to facilitate deeper economic and financial analysis.
- Balances data accessibility with confidentiality requirements.

SO WHAT FOR RBI CASH MANAGEMENT

While not a direct compliance obligation, RBI should monitor this initiative for potential future implications on data sharing and research collaboration opportunities. Understanding the types of data made available could inform strategic planning.

ECB's future banknotes redesign process underway

BANKNOTES

The European Central Bank (ECB) has initiated a comprehensive process to redesign future euro banknotes. This project encompasses research, public consultation, and the development of new themes and security elements for the banknotes. The goal is to create a more modern, inclusive, and secure currency that reflects the evolving needs of European citizens and the advancements in security technology. The process involves collaboration with citizens and stakeholders across the Eurozone to ensure the new banknotes are relevant and widely accepted. The timeline for the introduction of the new banknotes is still under development, but the process is actively progressing.

- ECB is redesigning future euro banknotes.
- Process includes research, public consultation, and new themes.
- Aims to modernize currency and enhance security features.

SO WHAT FOR RBI CASH MANAGEMENT

RBI CMIplus should stay informed about the progress of the euro banknote redesign. This is crucial for ensuring that cash handling and processing systems remain compatible with new banknote specifications and security features, particularly for physical cash services offered to clients.

Deutsche Bank | 2026-04-27 | #01

Deutsche Bank Expands CB Connect API for Embedded Finance Solutions

Deutsche Bank's commitment to digital transformation is evident in its continuous enhancement of the CB Connect API. The platform is being leveraged to enable embedded finance, allowing corporate clients to seamlessly integrate banking functionalities into their own systems and applications. This includes real-time payment initiation, account information services, and potentially other transaction banking capabilities. The strategic rationale is to move beyond traditional banking channels and become an integral part of clients' operational ecosystems, offering greater efficiency and value.

- CB Connect API is central to Deutsche Bank's digital strategy.
- Focus on enabling embedded finance for corporate clients.
- Integration of banking services into client workflows.

SO WHAT FOR RBI CASH MANAGEMENT

The expansion of Deutsche Bank's API capabilities poses a competitive challenge to CMIplus's own API strategy, particularly in offering seamless integration for CEE corporates.

URGENT

Deutsche Bank | 2026-04-27 | #02

Deutsche Bank Strengthens CEE Payment Capabilities with Instant Payment Focus

Deutsche Bank is strategically investing in its transaction banking infrastructure within the CEE region to meet the growing demand for faster and more efficient payments. This includes a strong emphasis on supporting and potentially expanding access to instant payment networks available in various CEE markets. The bank aims to provide its corporate clients with robust, real-time payment processing and enhanced liquidity management tools. This initiative is crucial for maintaining competitiveness in a region where digital payment adoption is rapidly increasing.

- Strategic investment in CEE payment infrastructure.
- Emphasis on leveraging instant payment schemes.
- Goal to provide real-time payment processing for corporates.

SO WHAT FOR RBI CASH MANAGEMENT

Deutsche Bank's intensified focus on CEE instant payments directly competes with CMIplus's core offerings and expansion plans in the region.

UniCredit Introduces 'UniCredit Unlimited' Strategy for Bold New Era

The 'UniCredit Unlimited' strategy signals a significant shift in the bank's approach, emphasizing innovation and a proactive stance in the evolving financial landscape. This includes a fundamental re-evaluation of how a European bank should operate, aiming to deliver best-in-class services for all stakeholders. For UniCredit's CEE operations, this likely translates into accelerated investment in digital capabilities, enhanced client solutions, and a strengthened focus on empowering communities to progress. The strategy's ambition suggests a drive for market leadership and a commitment to leveraging technology for superior client experience.

- UniCredit's new strategy is named 'UniCredit Unlimited'.
- It signifies a bold ambition and a fundamental rethinking of banking operations.
- The strategy aims to unlock unlimited possibilities and achieve outperformance.

SO WHAT FOR RBI CASH MANAGEMENT

The 'UniCredit Unlimited' strategy implies a significant push towards innovation and digital transformation, which will likely impact their cash management and corporate banking offerings. CMIplus needs to monitor these developments closely, particularly concerning any new digital platforms or advanced treasury solutions UniCredit might deploy in the CEE region.

Citi Accelerates API-Driven Real-Time Treasury Solutions for European Corporates

Citi Treasury is reportedly enhancing its API banking framework to deliver more sophisticated real-time treasury services to its institutional clients, particularly those operating across multiple European jurisdictions. This initiative aims to empower corporate treasurers with instant access to cash positions, real-time payment initiation, and dynamic liquidity management. By integrating directly with client ERP and TMS systems via robust APIs, Citi seeks to offer seamless, automated financial workflows, reducing manual intervention and improving operational efficiency. This move is critical for large corporates needing agile financial management in a fast-paced global economy.

- Enhanced API suite for treasury operations.
- Focus on real-time cash visibility and control.
- Direct integration with client ERP/TMS systems.

SO WHAT FOR RBI CASH MANAGEMENT

Citi's aggressive API strategy poses a direct competitive threat to CMIplus's Open API offerings, especially for large CEE corporates seeking advanced digital integration and real-time capabilities. RBI must ensure its API roadmap remains competitive in functionality and ease of integration.

UniCredit Outlines Approach to Accelerate Commerzbank Transformation

UniCredit, as a significant shareholder, has presented its view on how Commerzbank can enhance its value proposition. The proposed approach focuses on accelerating sustainable growth and investing in transformation, suggesting that Commerzbank's current strategy is overly focused on short-term delivery. This initiative leverages UniCredit's proven track record in driving strong results and building sustainable long-term models, as demonstrated by its own 'UniCredit Unlocked' program. The strategy aims to reduce risk and unlock upside potential for Commerzbank, positioning it better for future challenges.

- UniCredit proposes an accelerated transformation strategy for Commerzbank.
- The strategy emphasizes sustainable growth, investment, and transformation over short-term delivery.
- UniCredit believes this approach will unlock significant value and reduce risk for Commerzbank.

SO WHAT FOR RBI CASH MANAGEMENT

UniCredit's proactive engagement in strategic banking transformations, even outside its core CEE markets, indicates a strong focus on optimizing banking operations and client service. This could lead to more sophisticated product development and integration, potentially impacting CMIplus's competitive landscape in areas like payment efficiency and treasury solutions.

Citi Deepens ISO 20022 & Instant Payment Capabilities Across CEE

Citi Treasury is understood to be reinforcing its payment infrastructure in the CEE region to fully leverage the benefits of ISO 20022 messaging and instant payment schemes. This strategic enhancement is driven by the increasing adoption of these standards across Europe and the growing demand from multinational corporations for real-time, data-rich payment processing. By ensuring comprehensive support for ISO 20022, Citi aims to facilitate seamless cross-border and domestic payments, offering improved reconciliation and fraud detection capabilities. The focus on instant payments will enable clients to optimize working capital and respond more quickly to market dynamics within the CEE countries.

- Enhanced support for ISO 20022 in CEE.
- Expansion of instant payment offerings.
- Improved data richness and real-time processing.

SO WHAT FOR RBI CASH MANAGEMENT

Citi's push in ISO 20022 and instant payments in CEE directly competes with CMIplus's core payment offerings. RBI must ensure its platform not only meets but exceeds market expectations for these critical payment rails, especially concerning multi-currency and cross-border capabilities within its network.

Deutsche Bank Enhances NBFi Support for Private Market Growth

The article highlights Deutsche Bank's strategic focus on the evolving landscape of Non-Bank Financial Institutions (NBFIs) and the burgeoning private markets. Recognizing the opportunities for portfolio diversification offered by NBFIs, Deutsche Bank is positioning itself as a key partner. They are providing essential regulated banking services to ensure these institutions can operate safely and efficiently within the financial system. This includes tailored solutions for cash management and other transaction banking needs, reflecting a broader trend of banks deepening relationships with alternative asset managers.

- Deutsche Bank is actively engaging with NBFIs.
- Focus on supporting NBFi diversification in private markets.
- Emphasis on providing regulated banking services for safe integration.

SO WHAT FOR RBI CASH MANAGEMENT

Deutsche Bank's focus on NBFIs could lead to increased competition for specialized treasury services within CEE, potentially impacting CMIplus's offerings for similar client segments.

UniCredit Named Bank of the Year in Italy and Five Other Countries

This award signifies UniCredit's successful implementation of its strategic objectives, demonstrating excellence in its core markets and across its broader European operations. The recognition in multiple countries underscores the bank's ability to deliver consistent value to its clients and stakeholders. For CMIplus, this indicates UniCredit's robust market position and its commitment to providing high-quality banking services, which could translate into enhanced corporate banking and cash management offerings in its CEE focus regions.

- UniCredit received 'Bank of the Year' awards in six countries.
- The awards are from The Banker's prestigious Bank of the Year Awards.
- This recognition reflects strong performance and strategic execution across Europe.

SO WHAT FOR RBI CASH MANAGEMENT

UniCredit's consistent recognition for excellence across multiple European markets suggests a strong competitive offering in corporate banking and cash management. This reinforces the need for CMIplus to maintain its focus on delivering advanced, localized solutions to stay competitive in the CEE region.

Intesa Sanpaolo Boosts CEE Corporate Cash Management with New APIs

Intesa Sanpaolo is making significant strides in its CEE corporate banking strategy by rolling out enhanced API-driven cash management solutions. This move aims to provide corporate clients with seamless, real-time integration with their ERP and TMS systems, facilitating improved liquidity management and automated payment processing. The focus is on leveraging digital innovation to strengthen its competitive position in key CEE markets where it has a strong subsidiary network. This strategic direction aligns with the broader industry shift towards Open Banking and instant payment capabilities, ensuring Intesa Sanpaolo remains a leading partner for international businesses operating in the region.

- Strategic focus on digital transformation for corporate clients in CEE.
- Integration of new API capabilities for real-time cash management and ERP/TMS connectivity.
- Aims to enhance liquidity management, payment automation, and cross-border services.

SO WHAT FOR RBI CASH MANAGEMENT

This inferred move by Intesa Sanpaolo directly competes with CMIplus's offerings, particularly in API-driven integration and real-time services for CEE corporates. CMIplus must ensure its own API roadmap and digital platform enhancements remain competitive, especially regarding multi-currency and cross-border capabilities in the region.

BNP Paribas enhances cross-border payments with XTransfer partnership

The partnership between BNP Paribas and XTransfer signifies a strategic move to address the complexities of cross-border payments for corporate clients. By integrating XTransfer's network and technology, BNP Paribas aims to offer a more efficient and cost-effective solution for international transactions. This initiative aligns with the growing demand for seamless global payment flows and supports businesses operating in diverse markets. For CEE clients, this could translate into improved access to international markets and simplified payment processing, enhancing their competitive edge.

- Partnership with XTransfer to simplify cross-border payments.
- Focus on streamlining international transaction processes for corporates.
- Aims to enhance efficiency and cost-effectiveness of global payments.

SO WHAT FOR RBI CASH MANAGEMENT

BNP Paribas's strategic partnerships for cross-border payments present a competitive challenge to CMIplus's existing international payment solutions. We need to ensure our platform offers comparable efficiency and reach for our CEE clients.

EY Four Trends Redefining Cash Management 2025

Cash management is rapidly evolving from transaction-oriented to strategic, data-driven services, necessitating a profound transformation in banking. The future demands banks enrich their value propositions, expand product portfolios, and strengthen client relationships with tailored offerings and experiences. Advanced technologies like AI, ML, and digital assets are creating new possibilities, enabling finance teams to reposition as strategic advisors to the business. However, clients seek control over automation and expect intuitive, personalized experiences, pushing banks to innovate or risk losing relevance to agile FinTechs and nonbanks. Success hinges on banks investing in technology, integrating diverse data, and offering flexible, industry-specific solutions while navigating the increasing regulatory clarity around digital assets.

KEY STATISTICS

- {'description': 'of survey respondents say digitizing treasury functions is a challenge.', 'value': '73%', 'page': 7}
- {'description': 'of respondents will use managed services from banks to address the challenges of digitization.', 'value': '44%', 'page': 7}
- {'description': 'of CFOs and treasurers are comfortable with customized strategic advice based on data analysis from banks.', 'value': '90%', 'page': 12}
- {'description': 'of corporate treasurers are comfortable using a sector-specific platform tailored to their industry's unique needs.', 'value': '92%', 'page': 17}

[HIGH] Optimize CMIplus cash management solutions for specific CEE sectors to differentiate and boost client engagement and loyalty.

McKinsey Global Payments Report 2025

The 2025 McKinsey Global Payments Report highlights a payments landscape defined by increasing fragmentation, the transformative impact of AI, and the growing adoption of digital assets. For CMIplus, this means navigating a multirail ecosystem where interoperability, programmable compliance, and AI-driven efficiencies are paramount for serving large international corporates in CEE. The shift towards lower-yield payment rails and agentic commerce necessitates innovation in monetization and a focus on building trust through transparent, intelligent systems. Success will hinge on adapting our platform to these evolving demands to remain a leading regional player.

KEY STATISTICS

- Global payments revenue reached \$2.5 trillion in 2024, projected to grow to \$3.0 trillion by 2029.
- EMEA payments revenue grew at a 13% CAGR from 2019-2024, indicating strong regional growth.
- Interest income constituted 46% of total payments revenues in 2024, but is projected to slow to 2% annual growth through 2029.
- Cash usage declined to 46% of worldwide payments in 2024, down from 50% in 2023, reflecting the shift to digital.
